Engineering Compendium on Radiation Shielding R.G. Jaeger, E.P. Blizard, A.B. Chilton, M. Grotenhuis, A. Hönig, T.A. Jaeger, H.H. Eisenlohr, 1975 The utilization of nuclear energy makes great demands on the knowledge of the engineers engaged in design work and calculations relating to construction in nuclear industry Apart of course from nuclear reactors themselves a great deal of nuclear experience is involved in the design and construction of radiotherapy centres non destructive testing laboratories particle accelerators radioisotope laboratories and nuclear research plants Whereas in the USA there appears to be no great difference in the methods of training personnel for fundamental or for applied science European universities draw a sharp dividing line between the two fields However if we consider graduates solely from the point of view of their activities at their place of employment two types of personnel can be distinguished scientifically oriented research workers and those with a more technical and practical background who are looking for rational and rapid methods and solutions even at some expense in terms of accuracy The Engineering Compendium on Radiation Shielding endeavours to cover both approaches the scientific and the technical Volume I was devoted to the fundamental aspects of shielding while Volumes II and III discuss its technology Engineering compendium on radiation shielding R. G. Jaeger, 1968 *Handbook of Nuclear Engineering* Dan Gabriel Cacuci, 2010-09-14 This is an authoritative compilation of information regarding methods and data used in all phases of nuclear engineering Addressing nuclear engineers and scientists at all levels this book provides a condensed reference on nuclear engineering since 1958 Handbook Of Accelerator Physics And Engineering (3rd Printing) Maury Tigner, 1999-03-26 Edited by internationally recognized authorities in the field this expanded edition of the bestselling Handbook first published in 1999 is aimed at the design and operation of modern accelerators including Linacs Synchrotrons and Storage Rings It is intended as a vade mecum for professional engineers and physicists engaged in these subjects With a collection of 2200 equations 345 illustrations and 185 tables here one will find in addition to the common formulae of previous compilations hard to find specialized formulae recipes and material data pooled from the lifetime experience of many of the world s most able practitioners of the art and science of accelerators The eight chapters include both theoretical and practical matters as well as an extensive glossary of accelerator types Chapters on beam dynamics and electromagnetic and nuclear interactions deals with linear and nonlinear single particle and collective effects including spin motion beam environment beam beam and intrabeam interactions The impedance concept and calculations are dealt with at length as are the instabilities associated with the various interactions mentioned A chapter on operational considerations deals with orbit error assessment and correction Chapters on mechanical and electrical considerations present material data and important aspects of component design including heat transfer and refrigeration Hardware systems for particle sources feedback systems confinement and acceleration both normal conducting and superconducting receive detailed treatment in a subsystems chapter beam measurement techniques and apparatus being

treated therein as well The closing chapter gives data and methods for radiation protection computations as well as much data on radiation damage to various materials and devices A detailed index is provided together with reliable references to the literature where the most detailed information available on all subjects treated can be found

Computational Methods in Reactor Shielding James Wood, 2013-10-22 Computational Methods in Reactor Shielding deals with the mathematical processes involved in how to effectively control the dangerous effect of nuclear radiation Reactor shielding is considered an important aspect in the operation of reactor systems to ensure the safety of personnel and others that can be directly or indirectly affected Composed of seven chapters the book discusses ionizing radiation and how it aids in the control and containment of radioactive substances that are considered harmful to all living things The text also outlines the necessary radiation quantities and units that are needed for a systemic control of shielding and presents an examination of the main sources of nuclear radiation A discussion of the gamma photon cross sections and an introduction to BMIX a computer program used in illustrating a technique in identifying the gamma ray build up factor for a reactor shield are added The selection also discusses various mathematical representations and areas of shielding theory that are being used in radiation shielding The book is of great value to those involved in the development and implementation of systems to minimize and control the dangerous and lethal effect of radiation

Handbook of Accelerator Physics and Engineering Alex Chao, 1999 Edited by internationally recognized authorities in the field this handbook focuses on Linacs Synchrotrons and Storage Rings and is intended as a vade mecum for professional engineers and physicists engaged in these subjects Here one will find in addition to the common formulae of previous compilations hard to find specialized formulae recipes and material data pooled from the lifetime experiences of many of the world's most able practitioners of the art and science of accelerator building and operation
