Melosi, 2000 The authors examines water supply and waste disposal in U S cities from Colonial times to the present day **System City**, 2013-08-19 A radical shift is taking place in the way that society is thinking about cities a change from the machine metaphors of the 20th century to mathematical models of the processes of biological and natural systems From this new perspective cities are regarded not simply as spatially extended material artefacts but as complex systems that are analogous to living organisms exhibiting many of the same characteristics There is an emerging view that the design of the thousands of new cities needed for an expanding world population are to be founded on intelligent and inhabited infrastructural systems or flow architectures of urban metabolisms The physical arrays of the flow architecture of the city are intimately connected to the networks of subsidiary systems that collect and distribute energy materials and information They animate the city and should therefore be intimately coupled to the spatial and cultural patterns of life in the city to the public spaces through which people flow and should unite rather than divide urban morphological and ecological systems Featured architects AMID zero9 Buro Happold Foster Partners Groundlab and SOM Contributors include Joan Busquets Kate Davies and Liam Young Mehran Gharleghi Evan Greenberg and George Jeronimidis Marina Lathouri Wolf Mangelsdorf Daniel Segraves Jack Self Ricard Sol and Sergi Valverde and Iain Stewart **Designing Gotham** Jon Scott Logel, 2016-10-12 Between 1817 and 1898 New York City evolved from a vital Atlantic port of trade to the center of American commerce and culture With this rapid commercial growth and cultural development New York came to epitomize a nineteenth century metropolis Although this important urban transformation is well documented the critical role of select Union soldiers turned New York engineers has until now remained largely unexplored In *Designing Gotham* Jon Scott Logel examines the fascinating careers of George S Greene Egbert L Viele John Newton Henry Warner Slocum and Fitz John Porter all of whom studied engineering at West Point served

in the United States Army during the Civil War and later advanced their civilian careers and status through the creation of Victorian New York. These influential cadets trained at West Point in the nation's first engineering school, a program designed by Sylvanus Thayer and Dennis Hart Mahan that would shape civil engineering in New York and beyond. After the war, these industrious professionals leveraged their education and military experience to wield significant influence during New York's social, economic, and political transformation. Logel examines how each engineer's Civil War service shaped his contributions to postwar activities in the city, including the construction of the Croton Aqueduct, the creation of Central Park, and the building of the Brooklyn Bridge. Logel also delves into the administration of New York's municipal departments in which Military Academy alumni interacted with New York elites, politicians, and civilian-trained engineers. Examining the West Pointers' experiences as cadets, military officers during the war, and New Yorkers, Logel assesses how these men impacted the growing metropolis, the rise of professionalization, and the advent of Progressivism at the end of the century. *Livable Streets 2.0* Bruce Appleyard, 2020-10-30 *Livable Streets 2.0* offers a thorough examination of the struggle between automobiles, residents, pedestrians, and other users of streets, along with evidence-based, practical strategies for redesigning city street networks that support urban livability. In 1981, when Donald Appleyard's *Livable Streets* was published, it was globally recognized as a groundbreaking work, one of the most influential urban design books of its time. Unfortunately, he was killed a year later by a speeding drunk driver. This latest update, *Livable Streets 2.0*, revisited by his son Bruce, updates the topic with the latest research, new case studies, and best human-centered practices for creating more livable streets for all. It is essential reading for those who influence future directions in city and transportation planning, urban design, and community regeneration and placemaking. *Perspectives on Projects* Rodney J. Turner, Martina Huemann, Frank T. Anbari, Christophe N. Bredillet, 2010-06-10 Modern project management had its genesis in the field of operations research in the late 1940s, but today it is a much more diverse subject. It has evolved and developed a much wider range of methods, techniques, and skills that the project manager can draw upon. Not all these skills are relevant to every project, but an assortment of them will be relevant to most. This book aims to describe for students, researchers, and managers the full range of skills that project managers can use to develop their methodologies. The authors group the skills into nine perspectives representing nine schools of project management research and theory. By attaching a metaphor to each of these perspectives, students, researchers, and managers are better able to understand each approach and decide whether it is best suited to the development of a strategy for managing their project. *Perspectives on Projects* builds upon the various theoretical orientations that the field of project management has developed. Featuring several case studies drawn from a variety of settings to illustrate how the different schools can provide different perspectives on projects, this book is an ideal text for anyone involved in project management. **Definitions, Concepts and Scope of Engineering Asset Management** Joe E.
