LaMoreaux, Travis Hughes, 2013-03-09 This book is designed for scientists and engineers who want practical information to plan manage write and review geologic and hydrologic projects and reports It provides step by step methods to prepare more timely readable and technically accurate reports Detailed guidelines are provided to prepare the different subjects included in this book Source references project proposals and checklists are included to assist authors The use of the techniques described in this book will result in less time spent in report writing editing rewriting and review which will save time and money This book is the result of nearly 50 years of experience in program and project development in the field of hydrogeology The two main authors P E LaMoreaux and Fakhry Assaad who submitted both the idea and the major subjects of the book have been closely associated during this period with the Geological Survey of Egypt the General Desert Development Organization in Egypt the U S Geological Survey USGS the Geological Survey of Alabama the University of Alabama and in a great variety of consulting projects in different States of America and over the world It is based on experience from the assignment and supervision of many professionals with a great variety of academic training and experience

**Field Methods for Geologists and Hydrogeologists** Fakhry A. Assaad, James W. LaMoreaux, Travis Hughes, 2014-03-12 From the reviews is a must for serious field novices and for seasoned middle career and senior practitioners in hydrogeology mainly those people who answer a calling to offer honest and accurate hydrogeological approximations and findings Any engineering geologist or groundwater geologist who claims capability as a Hydrogeologist should own this book and submit it to highlighting and page tabbing Of course the same goes for those who practice in karst terranes as author LaMoreaux is one of the pioneers in this field worldwide Allen W Hatheway

Field Methods for Petroleum Geologists Fakhry A. Assaad, 2008-09-26 Provides an introduction to petroleum exploration methods referring to both geophysical and geochemical techniques and the logistics of various drilling techniques and well logging methods for oil and gas exploration The second part of the book focuses on using these methods for petroleum exploration within the context of northern Africa The geology of northern Africa is described and computerized lithographic correlation charts are presented and applied to petroleum exploration targets from the region *Aquifer Characterization Techniques* Robert G. Maliva, 2016-05-26 This book presents an overview of techniques that are available to characterize sedimentary aquifers Groundwater flow and solute transport are strongly affected by aquifer heterogeneity Improved aquifer characterization can allow for a better conceptual understanding of aquifer systems which can lead to more accurate groundwater models and successful water management solutions such as contaminant remediation and managed aquifer recharge systems This book has an applied perspective in that it considers the practicality of techniques for actual groundwater management and development projects in terms of costs technical resources and expertise required and investigation time A discussion of the geological causes types and scales of aquifer heterogeneity is first provided Aquifer

characterization methods are then discussed followed by chapters on data upscaling groundwater modelling and geostatistics This book is a must for every practitioner graduate student or researcher dealing with aquifer characterization *Advances in Geoengineering, Geotechnologies, and Geoenvironment for Earth Systems and Sustainable Georesources Management* Helder I. Chaminé, José Augusto Fernandes, 2023-05-27 This book comprises the peer reviewed proceedings of the 1st Conference on Georesources Geomaterials Geotechnologies and Geoenvironment 4GEO Porto Portugal on November 7 8 2019 The book interests all researchers practitioners and students in engineering geosciences geotechnics georesources materials engineering and earth and environmental sciences Georesources geomaterials geotechnologies and geoenvironment are very topical subjects and therefore deserve a deeper reflection by academia practitioners and society That approach is vital to a correct sustainable resource management and an engineering design with nature within a geoethical framework Georesources understood as geological hydrological and energetic resources are greatly important to society Minerals rocks and water are resources that over time have assumed an important role in the technological development of communities Given the increase in population and the increasing needs and intensification of their use it is very important to ensure their sustainable management Geomaterials are functional geological materials artificially processed for the generality of the activities developed by societies The functional geomaterials may include rock clay granular materials treated soils and industrial waste Geotechnologies are a very important tool for decision making supporting the collection mapping processing and analysis of data with geographical information systems and other geo techniques used in the most diverse fields including to support the monitoring and prediction of geohazards The geoenvironment is a transversal field that identifies continuous earth changes and to find solutions to the resulting socioeconomic and environmental changes Climate change industrialization and anthropic activity are among others factors of pressure and alteration of the natural environment so minimizing impacts and emerging hazards and risks Main topics include 1 Geomaterials Geotechnics and Georesources 2 Geotechnologies Engineering Geosciences and Geohazards 3 Geoenvironment Water and Climate Change *Field Sampling Methods for Remedial Investigations* Mark Edward Byrnes, 2008-08-25 Originally published in 1994 the first edition of Field Sampling Methods for Remedial Investigations soon became a premier resource in the field The Princeton Groundwater course designated it as one of the top books on the market that address strategies for groundwater well installation well completion and groundwater sampling This long awaited

**Arid Lands Water Evaluation and Management** Robert Maliva, Thomas Missimer, 2012-06-09 A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands It describes the techniques that can be used to assess and manage the water resources of these areas with an

emphasis on groundwater resources including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas including the need to be aware of cultural sensitivities and conditions unique to many arid regions The integration of existing resources with the addition of new water sources such as desalination of brackish water and seawater along with reusing treated wastewater will be required to meet future water supply needs Also changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions
