

The greenhouse effect is the process by which the Earth's surface is warmed by the atmosphere. The sun's rays hit the Earth's surface and are absorbed. The surface then radiates heat back into the atmosphere, which is trapped by the greenhouse gases, warming the planet.

The greenhouse effect is a natural process that warms the Earth's surface. When the Sun's rays hit the Earth, they are absorbed by the land and water. The land and water then radiate heat back into the atmosphere. The atmosphere is made up of gases that trap some of this heat, warming the Earth. This is the greenhouse effect. Without the greenhouse effect, the Earth would be too cold to support life. However, human activities have increased the amount of greenhouse gases in the atmosphere, leading to global warming.
