Fiber Optic Essentials Wiley Survival Guides In Engineering And Science:

Fiber Optic Essentials K. S. Thyagarajan, Ajoy Ghatak, 2007-08-31 Fiber Optic Essentials starts with a basic discussion on lightwaves and the phenomenon of refraction and reflection. It then goes on to introduce the reader to the field of fiber optics and covers some of the recent developments such as fiber amplifiers, dispersion compensation and nonlinear effects. A number of other applications are also presented. Examples and comparison with everyday experience are provided wherever possible to help the reader's comprehension. Diagrams are also included to aid in the visualization of certain concepts.

Introduction to Nanoscience and Nanotechnology Chris Binns, 2010-10-19 Introduction to Nanoscience and Nanotechnology explains nanotechnology to an audience that does not necessarily have a scientific background. It covers all aspects including the new areas of biomedical applications and the use of nanotechnology to probe the quantum vacuum. After discussing the present state of the art in nanotechnology, the book makes estimates of where these technologies are going and what will be possible in the future.

Microwave Engineering Gérard Barué, 2008-07-25 Everything readers need to implement and support a wireless point-to-point communications environment. In order to cope with the tremendous explosion of the telecommunications market, the field of wireless communications has greatly expanded in the past fifty years, especially in the domains of microwave radio systems including line-of-sight satellites and tropospheric scatter. Now Microwave Engineering: Land Space Radio communications answers the growing worldwide demand for an authoritative book on this important and emerging subject area. In five succinct chapters, the book introduces students and practicing engineers to the main propagation phenomena that are encountered and that must be considered in the design and planning for any given system type and frequency of operation: Electromagnetic wave propagation: An introduction to the fundamental theory of radiation and propagation of electromagnetic waves; polarization; antenna properties; free space attenuation; atmospheric refractivity; diffraction; reflection; multipath and scattering mechanisms; hydrometeor effects and probability distributions; Principles of digital communication systems; Modulation techniques; signal processing; error probability; spectral characteristics; spectrum efficiency; thermal noise; intermodulation; jamming and interference; Microwave line-of-sight systems; Path profile; flat fading and frequency selective fading; interferometric method for space and frequency diversity techniques; International Standards and ITU Recommendations; optimization of the frequency plan; resource link budget; quality, reliability and availability; Microwave transhorizon systems; Design of beyond the horizon communication systems; properties of scattering and diffraction modes; multipath statistical relations; long term and short term field strength variations; quality of service; optimization of antenna alignment and experimental analysis of various diversity and combining methods; Satellite communications; Design of satellite communications systems; orbital parameters; Earth satellite geometry; uplink and downlink budgets for both space and Earth segments and total system noise temperature; Microwave Engineering: Land Space Radiocommunications is suitable for engineers involved in wireless telecommunications as well as for students.
