Fifty Dermatological Cases Fifty Dermatological Cases:

Fifty Dermatological Cases Daniel Creamer, Anthony du Vivier, 2004-12-22 The skin is often the first organ to show that a serious disease exists in the body Too often clues from the skin are missed or neglected when examining a patient From dog bites that don't heal to the dermatological effects of a vegan diet 50 Cases in Dermatological Medicine demonstrates the astonishing variety of cutaneous responses that occur **Top 50 Dermatology Case Studies for Primary Care** Danya Reich, Corinna Eleni Psomadakis, Bobby Buka, 2016-12-08 This landmark text is dedicated to the conversation had between a primary care physician and a dermatologist that is a true reflection of the way medicine works when these physicians collaborate on the same case The book uses actual case studies from the authors' offices and provides an accurate and real portrayal of the types of skin conditions primary care physicians encounter Answering questions such as when to treat how to treat when to refer when to biopsy and when to reassure this book informs and educates primary care physicians with a dermatologist's perspective Top 50 Dermatology Case Studies for Primary Care gives the reader an entirely new vantage point from which to view dermatologic cases and together with one of New York City's top dermatologists the authors look at the same case the same patient and compare what each did or would have done Written for family medicine and internal medicine physicians residents and providers Top 50 Dermatology Case Studies for Primary Care proves to be an invaluable resource in their day to day practices British Journal of Dermatology, 1906 **Archives of Dermatology and Syphilology**, 1920 **The British Journal of Dermatology (1888-1916)**, 1890 Vol 9 no 9 vol 28 includes a survey of current dermatological literature quarterly *American Journal of Dermatology and Genito-urinary Diseases*, 1901 **The British Journal of Dermatology and Syphilis**, 1916 **Dermatology and Syphilis [and] Urology**, 1908

dermatology a field notorious for having too many diseases with unknown etiologies Immunogenetic investigations have made targeted treatment strategies possible for diseases such as psoriasis and pemphigus Even though these strategies have revolutionized the management of chronic dermatological conditions such as psoriasis still there are a lot of unanswered questions For instance psoriasis patients respond very differently to each of the commercially available biological agents This diversity could be partially explained by the differences in the sets of genes responsible for disease induction in each individual Thus whole genome sequencing strategies if feasible at individual levels might help in tailoring these targeted treatments based on specific genetic backgrounds Our intention in preparing this book was to explore the broad spectrum of the genetic aspects of immunological processes involved in cutaneous diseases We have tried to cover most areas of dermatology where enough studies were available to gather a chapter Still there is a substantial lack of knowledge on the immunogenetics of many dermatological conditions We hope that this book would encourage the investigators to fill these gaps of knowledge
