US Health: A Failed System: Liaropoulos, Lykourgos,2016-10-29 Health has been one of the most frequent issues arising in the Social Policy debate for the last 60 or more years The answers given vary according to political ideology economic expediency and the moral standing of individuals and society The sources of funding are essentially two either the individual directly or a larger group acting on his behalf In the second case we have two main categories The individual is

either covered by private for profit insurance or by a public insurance scheme financed by mandatory employment contributions and or by taxes on income and or wealth The economic implications of each form of health insurance are immense for individuals employers the government and for the economy as a whole The main differentiation is the position of health care in the value system of society If health care is considered a right its financing must be similar to that of other public goods or rights such as justice national security personal safety basic education etc At the same time the provision of all public goods is a public responsibility and government is judged by how well it measures up to this responsibility If on the other hand health care is considered a good bought and sold on the market then it is up to individuals to provide for themselves Obviously this fundamental issue belongs to the sphere of politics and is up to society to judge according to its code of ethics The time to decide has come in America somewhat belatedly but in a way more acute than ever The health of individuals but also and mainly the economic health of the nation depends on the decision *Silent Spring at 50* Roger Meiners, Pierre Desrochers, Andrew Morriss, 2012-09-18 Widely credited with launching the modern environmental movement when published 50 years ago Rachel Carson's *Silent Spring* had a profound impact on our society As an iconic work the book has often been shielded from critical inquiry but this landmark anniversary provides an excellent opportunity to reassess its legacy and influence In *Silent Spring at 50 The False Crises of Rachel Carson* a team of national experts explores the book's historical context the science it was built on and the policy consequences of its core ideas Their findings much of what Carson presented as fact was slanted and today we know much of it is simply wrong **Bounded Disciplines and Unbounded Problems** Baruch Fischhoff, 2025-01-12 People often face complex novel fateful and wildly unbounded problems throughout their lives In their work disciplinary scientists hone their wisdom on the complexities of necessarily bounded problems *Bounded Disciplines and Unbounded Problems* offers a vision for schools of management science to bring these worlds together by doing more of what they do best co creating solutions in ways that serve the world and the disciplines Disciplinary wisdom is illustrated with studies eliciting beliefs and preferences Collaboration is illustrated with a wide variety of applications including climate energy health security technology and natural disasters The proposed strategy for bonding bounded disciplines offers a realistic path forward at a time when the value of academia is sometimes questioned by the public students and even some of its members General problems of health ,1920 *Vital and Health Statistics* ,1994

Methods and Problems of Medical Education Rockefeller Foundation, Rockefeller Foundation. Division of Medical Education, 1928 When People Come First João Biehl, Adriana Petryna, 2013-07-07 A people centered approach to global health When People Come First critically assesses the expanding field of global health It brings together an international and interdisciplinary group of scholars to address the medical social political and economic dimensions of the global health enterprise through vivid case studies and bold conceptual work The book demonstrates the crucial role of ethnography as an empirical lantern in global health arguing for a more comprehensive people centered approach Topics include the limits of technological quick fixes in disease control the moral economy of global health science the unexpected effects of massive treatment rollouts in resource poor contexts and how right to health activism coalesces with the increased influence of the pharmaceutical industry on health care The contributors explore the altered landscapes left behind after programs scale up break down or move on We learn that disease is really never just one thing technology delivery does not equate with care and biology and technology interact in ways we cannot always predict The most effective solutions may well be found in people themselves who consistently exceed the projections of experts and the medical scientific political and humanitarian frameworks in which they are cast When People Come First sets a new research agenda in global health and social theory and challenges us to rethink the relationships between care rights health and economic futures *The Medical Problems of Flying* Medical Research Council, 1920 **Boston Medical and Surgical Journal** , 1922 **The Boston Medical and Surgical Journal** , 1894
