Nonlinear Dynamics and Chaos with Student Solutions Manual Steven H. Strogatz, 2018-09-21 This textbook is aimed at newcomers to nonlinear dynamics and chaos especially students taking a first course in the subject The presentation stresses analytical methods concrete examples and geometric intuition The theory is developed systematically starting with first order differential equations and their bifurcations followed by phase plane analysis limit cycles and their bifurcations and culminating with the Lorenz equations chaos iterated maps period doubling renormalization fractals and strange attractors

MATLAB Manual, Ordinary Differential Equations John C. Polking, 1995

Differential Equations Charles Henry Edwards, David E. Penney, 2008 This practical book reflects the new technological emphasis that permeates differential equations including the wide availability of scientific computing environments like Maple Mathematica and MATLAB it does not concentrate on traditional manual methods but rather on new computer based methods that lead to a wider range of more realistic applications The book starts and ends with discussions of mathematical modeling of real world phenomena evident in figures examples problems and applications throughout the book For mathematicians and those in the field of computer science and engineering

Differential Equations Bruce P. Conrad, 2003 Written for beginners this well organized introduction promotes a solid understanding of differential equations that is flexible enough to meet the needs of many different disciplines With less emphasis on formal calculation than found in other books all the basic methods are covered first order equations separation exact form and linear equations as well as higher order cases linear equation with constant and variable coefficients Laplace transform methods and boundary value problems The book ssystems focus induces an intuitive understanding of the concept of a solution of an initial value problem in order to resolve potential confusion about what is being approximated when a numerical method is used The author outlines first order equations including linear and nonlinear equations and systems of differential equations as well as linear differential equations including the Laplace transform and variable coefficients nonlinear differential equations and boundary problems and PDEs For those looking for a solid introduction to differential equations
