

Human Body: Digestive System

The main functions of the digestive system are mechanical and chemical digestion, and absorption. Digestion is the process in which the body breaks food down into smaller molecules so that nutrients can be easily absorbed. The entire digestion process can take anywhere from 24 to 50 hours.

Mouth/Esophagus

Digestion begins in the mouth through the mechanical and chemical breakdown of food. Smooth muscle tissue in the esophagus squeezes the food down toward the stomach in a process called peristalsis.

Stomach

Mechanical and chemical digestion continues in the stomach. Smooth muscle tissue in the stomach wall squeezes and churns the material, while enzymes and chemicals are added to help further break down the food.

Stomach structure

The internal structure of the stomach has ridges and folds called rugae. This increases the surface area within the stomach and allows it to expand to hold more food.

Intestines

The small intestine and large intestine (colon) combined average 25 feet long.

Small Intestine

The majority of absorption takes place in the small intestine, which is about 20 feet long. The small intestine has 3 sections: duodenum, jejunum, and ileum.

Finger-like extensions called villi and microvilli increase the surface area of the small intestine, allowing maximum absorption of nutrients and water.

TWENTY-FIRST CENTURY'S FUEL SUFFICIENCY ROADMAP STEVE ESOMBA, Dr.,2012-06-06 We badly need new sources of clean energy to generate electricity heat and power our industries homes and workplaces Up to now we have relied on and used only fossil fuels to power our industrial and domestic activities The byproducts of fossil fuels include irreversible pollution and contamination of our Earth climate change global warming and increase in pathogenic and medication resistant diseases Exhaustible fossil fuels are expensive to produce and distribute and not everybody can afford them Why not switch to natural non polluting inexpensive inexhaustible fuels such as solar wind water etc fuels This is the timely message contained in TWENTY FIRST CENTURY S FUEL SUFFICIENCY ROADMAP You can make this message realisable Go on reading Thanks

The Complexity Paradox Kenneth Mossman,2014-08-26 Living systems exhibit a fundamental contradiction they are highly stable and reliable yet they have the capacity to adapt to changing environmental conditions This paradoxical behavior arises from the complexity of life a high degree of order and cooperation that emerges from relatively simple interactions among cellular components The Complexity Paradox proposes inventive interdisciplinary approaches to maintaining health and managing and preventing disease by considering the totality of human biology from the cellular level on up to entire populations of individuals From the perspective of complexity which acknowledges that there are limits to what we can know Kenneth L Mossman opens the door to understanding essential life processes in new and extraordinary ways By tying together evolution functional dynamics and investigations into how the body processes energy and uses genetic information Mossman s analysis expresses a unified theory of biology that fills a critical niche for future research in biology medicine and public health

A Geography of Digestion Nicholas Bauch,2017 A Geography of Digestion explores the legacy of the Kellogg Company one of America s most enduring and storied food enterprises In the late nineteenth century company founder John H Kellogg was experimenting with state of the art advances in nutritional and medical science at his Battle Creek Sanitarium At the same time he was involved in overhauling the form and function of the broader landscapes in which his health practice was situated Innovations in food manufacturing machinery urban sewer infrastructure and agricultural technology came together to forge an extensible geography of his patients bodies changing the way Americans consumed and digested food In this novel approach to the study of the Kellogg enterprise Nicholas Bauch asks his readers to think geographically about the process of digesting food Beginning with the stomach Bauch moves outward from the sanitarium through the landscapes and technologies that materialized Kellogg s particular version of digestion Far from a set of organs confined to the epidermal bounds of the body the digestive system existed in other places Moving from food processing machines to urban sewerage to agricultural fields A Geography of Digestion paints a grounded portrait of one of the most basic human processes of survival the incorporation of food into our bodies leading us to question where exactly our bodies are located Provided by publisher

Neuroendocrine-Immune System Interactions Jan Pieter Kongsman, Teresa M. Reyes, 2023-03-03 The concepts of the neuroendocrine system and the immune system emerged more or less simultaneously in the second half of the 20th century Although these systems have a high degree of autonomy it has also become clear that they interact in many ways and at different levels This book focuses on the neuroendocrine and immune interactions that are fundamental to normal development and maintenance of health The first introductory chapters are devoted to the historical and philosophical concepts within the field as well as evolutionary considerations offering critical interdisciplinary perspectives on the development of this field of research Without attempting an exhaustive overview the book then introduces some of the regulatory pathways that mediate interactions between the neuroendocrine and immune systems and examines modulating factors such as age and sex In addition several chapters address the importance of neuroendocrine immune interactions in some disease states Readers can expect to gain a broad perspective of neuroendocrine immune interactions in development health and disease along with a critical evaluation of current methods used in the field Given its scope the book is essential reading for undergraduate and graduate students with an interest in neuroendocrinology neuroimmunology and neuroscience as well as postdoctoral fellows and established researchers seeking a comprehensive overview and historical perspective of the field of neuroendocrine immune interactions
