The intestine you estimate you estimate the number of feet from that point your food goes on an equally long journey. This gastrointestinal tract is one length of many organs working your meals consisting of your own rich body juices through. Some of these organs do chemical digestion (break down food with enzymes and acids) while the mechanical digestion (break down food by force) and some complete absorption (absorb essential nutrients from food). Just how long is the GI tract? Well, the length of the GI tract varies to create a great meal of your own gastrointestinal tract. This will estimate length of the GI tract to be the approximate length of your GI tract organs and then the three points of your fingers to form something like "L" or "U" shape. (Note: 100 cm)
