3 key lessons for every new photographer

Shutter speed explained

Just like aperture settings and ISOs, shutter speeds go in a fixed sequence, with each full 'stop' being double (or half) the speed of its neighbour, though intermediate values are used too.

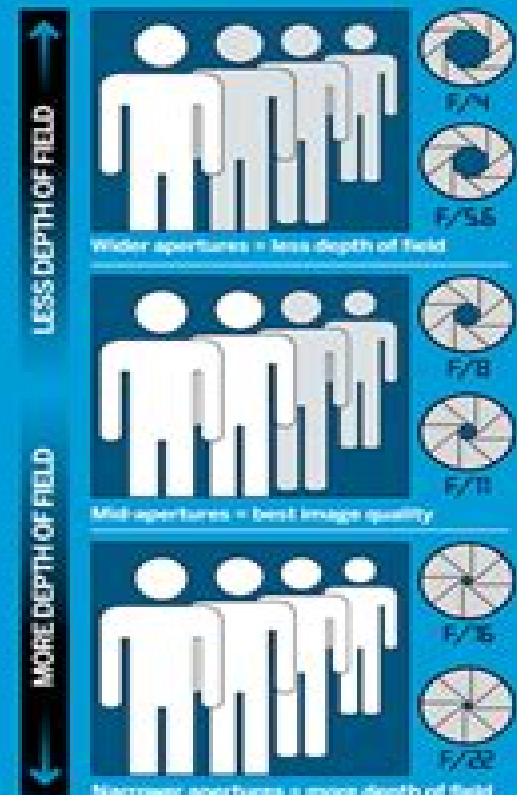

Focal length explained

The focal length of a lens and its angle of view go hand in hand. Wide-angle lenses have shorter focal lengths, while telephoto lenses have longer focal lengths. The smaller sensors on APS-C-format DSLRs have a 1.6x magnifying effect, known as the effective focal length or EFL.

Depth of field explained

The aperture is the main factor in dictating how much of the scene appears pin-sharp. The narrower the aperture (larger f/number) the more of the image will be in focus, the wider the aperture, the less of the image will be in focus.
