Hassler Whitney Collected Papers Volume I James Eelles,Domingo Toledo,1992-02-07 We present here the mathematical papers of Hassler Whitney This collection contains all the published papers with the exception of some short announcements that Whitney did not wish to be included We also include the introduction to his book Geometric Integration Theory and one previously unpublished manuscript on the four color problem The papers are presented under some broad categories graphs and combinatorics differentiable functions and singularities analytic spaces manifolds bundles and characteristic classes topology and algebraic topology geometric integration theory Whitney intended to write an introduction to this collection Unfortunately he left us no manuscript at the time of his death May 10 1989 We had discussed the possibility of using his paper Moscow 1935 Topology moving toward America written for the Centennial of the American Mathematical Society as part of his introduction to this collection an idea which he much liked We therefore include this paper which contains personal information as well as mathematical reflections as Whitney s own introduction to these volumes Whitney s mathematical style like his personal style was that of an explorer and pioneer One of the pictures included in these volumes shows him as a mountain climber In mathematics he preferred to work on undeveloped areas break new ground and build foundations During the last twenty years of his life he concentrated his efforts on developing an educational system that builds on the natural tendency in children to be explorers   **Proceedings of Liverpool Singularities - Symposium II. (University of Liverpool 1969/70)** C. T. C. Wall,2006-11-15   **Regularity of Minimal Surfaces** Ulrich Dierkes,Stefan Hildebrandt,Anthony Tromba,2010-08-16 Regularity of Minimal Surfaces begins with a survey of minimal surfaces with free boundaries Following this the basic results concerning the boundary behaviour of minimal surfaces and H

surfaces with fixed or free boundaries are studied In particular the asymptotic expansions at interior and boundary branch points are derived leading to general Gauss Bonnet formulas Furthermore gradient estimates and asymptotic expansions for minimal surfaces with only piecewise smooth boundaries are obtained One of the main features of free boundary value problems for minimal surfaces is that for principal reasons it is impossible to derive a priori estimates Therefore regularity proofs for non minimizers have to be based on indirect reasoning using monotonicity formulas This is followed by a long chapter discussing geometric properties of minimal and H surfaces such as enclosure theorems and isoperimetric inequalities leading to the discussion of obstacle problems and of Plateau s problem for H surfaces in a Riemannian manifold A natural generalization of the isoperimetric problem is the so called thread problem dealing with minimal surfaces whose boundary consists of a fixed arc of given length Existence and regularity of solutions are discussed The final chapter on branch points presents a new approach to the theorem that area minimizing solutions of Plateau s problem have no interior branch points **Global Analysis of Minimal Surfaces** Ulrich Dierkes,Stefan Hildebrandt,Anthony Tromba,2010-08-16 Many properties of minimal surfaces are of a global nature and this is already true for the results treated in the first two volumes of the treatise Part I of the present book can be viewed as an extension of these results For instance the first two chapters deal with existence regularity and uniqueness theorems for minimal surfaces with partially free boundaries Here one of the main features is the possibility of edge crawling along free parts of the boundary The third chapter deals with a priori estimates for minimal surfaces in higher dimensions and for minimizers of singular integrals related to the area functional In particular far reaching Bernstein theorems are derived The second part of the book contains what one might justly call a global theory of minimal surfaces as envisioned by Smale First the Douglas problem is treated anew by using Teichm ller theory Secondly various index theorems for minimal theorems are derived and their consequences for the space of solutions to Plateau s problem are discussed Finally a topological approach to minimal surfaces via Fredholm vector fields in the spirit of Smale is presented *New Complex Analytic Methods in the Study of Non-Orientable Minimal Surfaces in Rn* Antonio Alarcón,Franc Forstnerič,Francisco J. López,2020-05-13 All the new tools mentioned above apply to non orientable minimal surfaces endowed with a fixed choice of a conformal structure This enables the authors to obtain significant new applications to the global theory of non orientable minimal surfaces In particular they construct proper non orientable conformal minimal surfaces in Rn with any given conformal structure complete non orientable minimal surfaces in Rn with arbitrary conformal type whose generalized Gauss map is nondegenerate and omits n hyperplanes of CPn 1 in general position complete non orientable minimal surfaces bounded by Jordan curves and complete proper non orientable minimal surfaces normalized by bordered surfaces in p convex domains of Rn **Bifurcation Theory** Ale Jan Homburg,Jürgen Knobloch,2024-12-05 This textbook provides a thorough overview of bifurcation theory Assuming some familiarity with differential equations and dynamical systems it is suitable for use on advanced undergraduate and graduate level and can in particular be used for a

graduate course on bifurcation theory The book combines a solid theoretical basis with a detailed description of classical bifurcations It is organized in chapters on local nonlocal and global bifurcations a number of appendices develop the toolbox for the study of bifurcations The discussed local bifurcations include saddle node and Hopf bifurcations as well as the more advanced Bogdanov Takens and Neimark Sacker bifurcations The book also covers nonlocal bifurcations discussing various homoclinic bifurcations and it surveys global bifurcations and phenomena such as intermittency and period doubling cascades The book develops a broad range of complementary techniques both geometric and analytic for studying bifurcations Techniques include normal form methods center manifold reductions the Lyapunov Schmidt construction cross coordinate constructions Melnikov s method and Lin s method Full proofs of the results are provided also for the material in the appendices This includes proofs of the stable manifold theorem of the center manifold theorem and of Lin s method for studying homoclinic bifurcations **Mathematics Related to Physics** Raoul Bott,1994 Volume 4 **Elliptic Operators and Compact Groups** M.F. Atiyah,2006-08-01 These lectures based on joint work with I M Singer will describe an extension of the index theory of elliptic operators beyond that developed in 7 8 9 In those papers we studied as elliptic operator P invariant under a compact Lie group G *Minimal Surfaces from a Complex Analytic Viewpoint* Antonio Alarcón,Franc Forstnerič,Francisco J. López,2021-03-10 This monograph offers the first systematic treatment of the theory of minimal surfaces in Euclidean spaces by complex analytic methods many of which have been developed in recent decades as part of the theory of Oka manifolds the h principle in complex analysis It places particular emphasis on the study of the global theory of minimal surfaces with a given complex structure Advanced methods of holomorphic approximation interpolation and homotopy classification of manifold valued maps along with elements of convex integration theory are implemented for the first time in the theory of minimal surfaces The text also presents newly developed methods for constructing minimal surfaces in minimally convex domains of Rn based on the Riemann Hilbert boundary value problem adapted to minimal surfaces and holomorphic null curves These methods also provide major advances in the classical Calabi Yau problem yielding in particular minimal surfaces with the conformal structure of any given bordered Riemann surface Offering new directions in the field and several challenging open problems the primary audience of the book are researchers including postdocs and PhD students in differential geometry and complex analysis Although not primarily intended as a textbook two introductory chapters surveying background material and the classical theory of minimal surfaces also make it suitable for preparing Masters or PhD level courses Proceedings of the Conference on Transformation Groups P. S. Mostert,2012-12-06 These Proceedings contain articles based on the lectures and in formal discussions at the Conference on Transformation Groups held at Tulane University May 8 to June 2 1967 under the sponsorship of the Advanced Science Seminar Projects of the National Science Foun dation Contract No GZ 400 They differ however from many such Conference proceedings in that particular emphasis has been given to the review and exposition of the state of the theory in its various

mani festations and the suggestion of direction to further research rather than purely on the publication of research papers That is not to say that there is no new material contained herein On the contrary there is an abundance of new material many new ideas new questions and new conjectures arefully incorporated within the framework of the theory as the various authors see it An original objective of the Conference and of this report was to supply a much needed review of and supplement to the theory since the publication of the three standard works MONTGOMERY and ZIPPIN Topological Transformation Groups Interscience Pub lishers 1955 BOREL et aI Seminar on Transformation Groups Annals of Math Surveys 1960 and CONNER and FLOYD Differen tial Periodic Maps Springer Verlag 1964 Considering this objective ambitious enough it was decided to limit the survey to that part of Transformation Group Theory derived from the Montgomery School   **Variations on a Theme of Borel** Shmuel Weinberger,2022-12-08 Explains using examples the central role of the fundamental group in the geometry global analysis and topology of manifolds   *Singular Points of Complex Hypersurfaces. (AM-61), Volume 61* John Milnor,2016-03-02 The description for this book Singular Points of Complex Hypersurfaces AM 61 Volume 61 will be forthcoming   **Topics in Geometric Group Theory** Pierre de la Harpe,2000-10-15 In this book Pierre de la Harpe provides a concise and engaging introduction to geometric group theory a new method for studying infinite groups via their intrinsic geometry that has played a major role in mathematics over the past two decades A recognized expert in the field de la Harpe adopts a hands on approach illustrating key concepts with numerous concrete examples The first five chapters present basic combinatorial and geometric group theory in a unique and refreshing way with an emphasis on finitely generated versus finitely presented groups In the final three chapters de la Harpe discusses new material on the growth of groups including a detailed treatment of the Grigorchuk group Most sections are followed by exercises and a list of problems and complements enhancing the book s value for students problems range from slightly more difficult exercises to open research problems in the field An extensive list of references directs readers to more advanced results as well as connections with other fields   Harmonic Analysis and Representations of Semisimple Lie Groups J.A. Wolf,M. Cahen,M. de Wilde,2012-12-06 This book presents the text of the lectures which were given at the NATO Advanced Study Institute on Representations of Lie groups and Harmonic Analysis which was held in Liege from September 5 to September 17 1977 The general aim of this Summer School was to give a coordinated intro duction to the theory of representations of semisimple Lie groups and to non commutative harmonic analysis on these groups together with some glance at physical applications and at the related subject of random walks As will appear to the reader the order of the papers which follows relatively closely the order of the lectures which were actually give follows a logical pattern The two first papers are introductory the one by R Blattner describes in a very progressive way a path going from standard Fourier analysis on IR to non commutative harmonic analysis on a locally compact group the paper by J Wolf describes the structure of semisimple Lie groups the finite dimensional representations of these groups and introduces basic facts about infinite

dimensional unitary representations Two of the editors want to thank particularly these two lecturers who were very careful to pave the way for the later lectures Both these chapters give also very useful guidelines to the relevant literature
