Differential Equations of My Young Years Vladimir Maz'ya, 2014-03-26 Vladimir Maz'ya born 1937 is an outstanding mathematician who systematically made fundamental contributions to a wide array of areas in mathematical analysis and in the theory of partial differential equations In this fascinating book he describes the first thirty years of his life He starts with the story of his family speaks about his childhood high school and university years describe his formative years as a mathematician Behind the author's personal recollections with his own joys sorrows and hopes one sees a vivid picture of the time He speaks warmly about his friends both outside and inside mathematics The author describes the awakening of his passion for mathematics and his early achievements He mentions a number of mathematicians who influenced his professional life The book is written in a readable and inviting way sometimes with a touch of humor It can be of interest for a very broad readership

Harmonic Analysis and Partial Differential Equations Anatoly Golberg, Peter Kuchment, David Shoikhet, 2023-03-25 Over the course of his distinguished career Vladimir Maz'ya has made a number of groundbreaking contributions to numerous areas of mathematics including partial differential equations function theory and harmonic analysis The chapters in this volume compiled on the occasion of his 80th birthday are written by distinguished

mathematicians and pay tribute to his many significant and lasting achievements

Geometric Harmonic Analysis III Dorina Mitrea, Irina Mitrea, Marius Mitrea, 2023-05-12 This monograph presents a comprehensive self contained and novel approach to the Divergence Theorem through five progressive volumes Its ultimate aim is to develop tools in Real and Harmonic Analysis of geometric measure theoretic flavor capable of treating a broad spectrum of boundary value problems formulated in rather general geometric and analytic settings The text is intended for researchers graduate students and industry professionals interested in applications of harmonic analysis and geometric measure theory to complex analysis scattering and partial differential equations Volume III is concerned with integral representation formulas for null solutions of elliptic PDEs Calderón Zygmund theory for singular integral operators Fatou type theorems for systems of elliptic PDEs and applications to acoustic and electromagnetic scattering Overall this amounts to a powerful and nuanced theory developed on uniformly rectifiable sets which builds on the work of many predecessors

Dynamical Systems Lamberto Cesari, Jack K. Hale, Joseph P. LaSalle, 2014-05-10

Dynamical Systems An International Symposium Volume 1 contains the proceedings of the International Symposium on Dynamical Systems held at Brown University in Providence Rhode Island on August 12-16, 1974. The symposium provided a forum for reviewing the theory of dynamical systems in relation to ordinary and functional differential equations as well as the influence of this approach and the techniques of ordinary differential equations on research concerning certain types of partial differential equations and evolutionary equations in general. Comprised of 29 chapters, this volume begins with an introduction to some aspects of the qualitative theory of differential equations followed by a discussion on the Lefschetz fixed point formula. Nonlinear oscillations in the frame of alternative methods are then examined along with topology and nonlinear boundary value problems. Subsequent chapters focus on bifurcation theory, evolution governed by accretive operators, topological dynamics and its relation to integral equations and non-autonomous systems and non-controllability of linear time-invariant systems using multiple one-dimensional linear delay feedbacks. The book concludes with a description of sufficient conditions for a relaxed optimal control problem. This monograph will be of interest to students and practitioners in the field of applied mathematics.

Norbert Wiener: A Life in Cybernetics Norbert Wiener, 2018-03-23. Norbert Wiener's celebrated autobiography is available for the first time in one volume. *Norbert Wiener: A Life in Cybernetics* combines for the first time the two volumes of Norbert Wiener's celebrated autobiography. Published at the height of public enthusiasm for cybernetics when it was taken up by scientists, engineers, science-fiction writers, artists, and musicians, *Ex Prodigy* (1953) and *I Am a Mathematician* (1956) received attention from both scholarly and mainstream publications, garnering reviews and publicity in outlets that ranged from the *New York Times* and *New York Post* to the *Virginia Quarterly Review*. Norbert Wiener was a mathematician with extraordinarily broad interests. The son of a Harvard professor of Slavic languages, Wiener was reading Dante and Darwin at seven, graduated from Tufts at fourteen, and received a PhD from Harvard at eighteen. He joined MIT's Department of

Mathematics in 1919 where he remained until his death in 1964 at sixty nine In *Ex Prodigy* Wiener offers an emotionally raw account of being raised as a child prodigy by an overbearing father In *I Am a Mathematician* Wiener describes his research at MIT and how he established the foundations for the multidisciplinary field of cybernetics and the theory of feedback systems This volume makes available the essence of Wiener's life and thought to a new generation of readers **The**
