Digital Fabrication In Architecture Nick Dunn:

   Digital Fabrication in Architecture Nick Dunn,2012-09-07 With the increasing sophistication of CAD and other design software there is now a wide array of means for both designing and fabricating architecture and its components The proliferation of advanced modelling software and hardware has enabled architects and students to conceive and create designs that would be very difficult to do using more traditional methods The use of CAD technologies in the production of physical models prototypes and individual elements is increasingly widespread through processes such as CAD CAM CNC milling and rapid prototyping This translation of computer generated data to physical artefact can also be reversed with devices such as a digitiser which traces the contours of physical objects directly into the computer This book focuses on the inspiring possibilities for architecture that can be explored with all the different technologies and techniques available for making complete designs or their components   **Architectural Modelmaking** Nick Dunn,2014-09-30 The physical model is an important communication tool for architects Although the proliferation of CAD programs has enabled the creation of increasingly complex computer models and virtual environments there is also a growing need to address the three dimensional qualities of architecture that may be lost when using such media This book focuses on the inspiring possibilities for modeling the built environment with all the different media and techniques available In describing the use of different models in different contexts the book provides a practical guide to how and why models are used and what they are used for This second edition includes more detailed step by step exercises expanded discussion of materials and techniques and updated coverage of digital techniques   **Computational Design for Landscape Architects** Brendan Harmon,2024-05-31 This book is a guide to computational design for landscape architects replete with extensive tutorials It introduces algorithmic approaches for modeling and designing landscapes The aim of this book is to use algorithms to understand and design landscape as a generative system i e to harness the processes that shape landscape to generate new forms An algorithmic approach to design is gently introduced through visual programming with Grasshopper before more advanced methods are taught in Python a high level programming language Topics covered include parametric design randomness and noise waves and attractors lidar drone photogrammetry point cloud modeling terrain modeling earthworks digital fabrication and more The chapters include sections on theory methods and either visual programming or scripting Online resources for the book include code and datasets so that readers can easily follow along and try out the methods presented This book is a much needed guide both theoretical and practical on computational design for students educators and practitioners of landscape architecture   **Landscape Architecture and Digital Technologies** Jillian Walliss,Heike Rahmann,2016-02-12 Landscape Architecture and Digital Technologies explores how digital technologies are reshaping design and making in landscape architecture While the potentials of digital technologies are well documented within landscape planning and visualisation their application within design practice is far less understood This book highlights the

role of the digital model in encouraging a new design logic that moves from the privileging of the visual to a focus on processes of formation bridging the interface of the conceptual and material the virtual and the physical Drawing on interviews and projects from a range of international designers including Sn hetta Arup Gustafson Porter ASPECT Studios Grant Associates Catherine Mosbach Philippe Rahm PARKKIM LAAC and PEG office of landscape architecture among others the authors explore the influence of parametric modelling scripting real time data simulation prototyping fabrication and Building Information Modelling on the design and construction of contemporary landscapes This engagement with practice is expanded through critical reflection from academics involved in landscape architecture programs around the world that are reshaping their research and pedagogy to reflect an expanded digital realm Crossing critical theory technology and contemporary design the book constructs a picture of an emerging twenty first century practice of landscape architecture practice premised on complexity and performance It also highlights the disciplinary demands and challenges in engaging with a rapidly evolving digital context within practice and education The book is of immense value to professionals and researchers and is a key publication for digital landscape courses at all levels **Building the Architect's Character** Kendra Schank Smith,Albert Smith,2017-12-22 An understanding of architects character traits can offer important insights into how they design buildings These traits include leadership skills necessary to coordinate a team honest and ethical behavior being well educated and possessing a life long love of learning flexibility resourcefulness and visionary and strategic thinking Characteristics such as these describe a successful person Architects also possess these traits but they have additional skills specifically valuable for the profession These will include the ability to question the use of digital media new materials processes and methods to convey meaning in architectural form Although not exhaustive a discussion of such subjects as defining imaging persuading and fabricating will reveal representational meaning useful for the development of an understanding of architects character Through the analogies and metaphors found in Greek myth the book describes the elusive hard to define characteristics of architects to engage the dilemmas of a changing architectural landscape Building the Architect s Character Explorations in Traits examines traditional and archetypal characteristics of the successful architect to ask if they remain relevant today **Small-Scale Public Transportable and Pre-Fabricated Buildings** Junjie Xi,2018-04-09 This book investigates the design operation and use of contemporary transportable buildings and explores how functional performance can be assessed in small scale examples for public use alongside their relationship to other design elements The research focuses on three case studies Chengdu Hualin Elementary School Exxopolis and Kreod that do not require a high technology building environment or complex construction skills Transportable buildings are defined as those that are transported in a number of parts for assembly on site Contemporary transportable buildings respond to ecological issues social impacts technological innovation and economic demands They can be used to measure a society s development in environmental sustainability innovation and economic growth through various forms Small scale transportable buildings

fulfil many temporary habitation needs in diverse roles such as non emergency transitional housing ephemeral exhibition buildings and seasonal entertainment facilities Small Scale Public Transportable and Pre Fabricated Buildings will be a useful research text for academics and students in architecture design and sustainable building performance
