

How to Pick Your Camera

Sure, a photo that you take on your phone can look great... on your phone.

But even camera phones boasting **8 megapixels** tend to produce images that look **CRAP** when viewed on a computer screen or printed out.

It's incredibly disappointing to take a fantastic picture on your phone only to realize that it's too low in quality to blow up and print out.

A good digital camera won't cost you a lot of money, but will give you pictures good enough to frame. If you're at all serious about photography, step one is getting a camera that can do the job.

Megapixels

What are they? I want them!

4 megapixels

8 megapixels

A pixel is the smallest unit of data that goes into constructing a digital image. A 1 megapixel image is a picture that makes up an image determined how large you can display the image before it becomes too blurry.

16 megapixels

Here is 3 megapixel image and a 10 megapixel image of a banana.

3 megapixel image

10 megapixel image

When viewed at a small size they are nearly identical.

But the 10 megapixel image contains a lot more data, so here what we see when we enlarge both of the images:

3 megapixel image

10 megapixel image

As you can see, the 10 megapixel image still looks sharp when enlarged. The 3 megapixel image is pretty useless at this size. The moral of the story is that megapixels matter when you want large photos.

This is a good time to mention...

Optical vs Digital Zoom

Optical zoom is where the lenses of a camera actually magnify the image hitting the sensor. You can zoom in on a picture without sacrificing any quality.

Telescopic lens

Fixed lens

Digital zoom is what camera phones offer because the lenses are fixed. The zoom takes only a portion of the image and enlarges it in the same way as the camera and enlarges it in the same way as the camera and enlarges it in the same way as the camera. There is always loss in the quality of the image with digital zoom.

DSLR vs Compact

Compact Cameras are generally more affordable than DSLR cameras. They are also more portable and easier to use. They are also more affordable and easier to use. They are also more affordable and easier to use. They are also more affordable and easier to use.

Digital Single Lens Reflex (DSLR)

If you're interested in pursuing more advanced digital photography, you should consider a Digital Single Lens Reflex (DSLR) camera. They offer a lot of features, including interchangeable lenses, a viewfinder, and a larger sensor. They are also more expensive than compact cameras.

DSLRs generally don't have LCD displays to help you compose your shot. In order to see what you're shooting, DSLRs take photos very quickly. If you're serious about action shots, DSLR is probably for you.
