J. Steck, Barbara Steck, 2016 Recent advances in the understanding of brain functions are reviewed in this text along with how neurobiological research and brain imaging contributes to identifying and treating neurologic and psychiatric disorders Chapters focus on consciousness memory emotions language communication trauma pain and resilience while exploring how stressful events impact mental health and interrupt the continuity of one's sense of self Clinical vignettes of patients with neurological and mental affections reveal coping and grieving processes in dreams and narratives This presentation of clinical experience with neuro scientific evidence provides neurologists psychiatrists psychotherapists and psychologists with a coherent picture of the brain mind relationship **A Little Study of the Objective and Subjective Mind;** Abby Jane Taylor, 2023-07-18 This concise and accessible book provides an introduction to the concepts of objective and subjective experience in psychology The book covers the origins and development of these concepts and explores their implications for the study of human behavior and cognition It is an essential resource for students and scholars interested in the foundational concepts of psychology This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant ***Rethinking Consciousness: A Scientific Theory of Subjective Experience*** Michael S A Graziano, 2019-09-17 A first class intellectual adventure Brian Greene author of *Until the End of Time* Illuminating his groundbreaking theory of consciousness known as the attention schema theory Michael S A Graziano traces the evolution of the mind over millions of years with examples from the natural world to show how neurons first allowed animals to develop simple forms of attention and then to construct awareness of the external world and of the self His theory has fascinating implications for the future it may point the way to engineers for building consciousness artificially and even someday taking the natural consciousness of a person and uploading it into a machine for a digital afterlife

Science, Objectivity, and Consciousness Emilios Bouratinos, This thought provoking work offers a profound scholarly examination of how the process of objectification has come to limit our scientific and philosophical views of reality The author proposes a new self reflective interdisciplinary science of consciousness one that recognizes subjective experience as a vital component of the activity of consciousness By creating a bridge over the subject object divide Emilios Bouratinos hopes to open a door to a new kind of science leading to both the betterment of research in many fields and the long term assurance of human survival

The Conscious Brain Jesse J. Prinz, 2012-08-17 The problem of consciousness continues to be a subject of great debate in cognitive science Synthesizing decades of research *The Conscious Brain* advances a new theory of the psychological and neurophysiological correlates of conscious experience Prinz s account of consciousness makes two main claims first consciousness always arises at a particular stage of perceptual processing the intermediate level and second consciousness depends on attention Attention changes the flow of information allowing perceptual information to access memory systems Neurobiologically this change in flow depends on synchronized neural firing Neural synchrony is also implicated in the unity of consciousness and in the temporal duration of experience Prinz also explores the limits of consciousness We have no direct experience of our thoughts no experience of motor commands and no experience of a conscious self All consciousness is perceptual and it functions to make perceptual information available to systems that allows for flexible behavior Prinz concludes by discussing prevailing philosophical puzzles He provides a neuroscientifically grounded response to the leading argument for dualism and argues that materialists need not choose between functional and neurobiological approaches but can instead combine these into neurofunctional response to the mind body problem *The Conscious Brain* brings neuroscientific evidence to bear on enduring philosophical questions while also surveying challenging and extending philosophical and scientific theories of consciousness All readers interested in the nature of consciousness will find Prinz s work of great interest

Consciousness and the Limits of Objectivity Robert J. Howell, 2013-06-14 In *Consciousness and the Limits of Objectivity* Robert J Howell argues that the options in the debates about consciousness and the mind body problem are more limited than many philosophers have appreciated Unless one takes a hard line stance which either denies the data provided by consciousness or makes a leap of faith about future discoveries one must admit that no objective picture of our world can be complete Howell argues however that this is consistent with physicalism contrary to received wisdom After developing a novel neo Cartesian notion of the physical followed by a careful consideration of the three major anti materialist arguments Black s Presentation Problem Jackson s Knowledge Argument and Chalmers Conceivability Argument Howell proposes a subjective physicalism which gives the data of consciousness their due while retaining the advantages of a monistic physical ontology

The Science of Subjectivity J. Neisser, 2015-04-02 Can neuroscience help explain the first person perspective *The Science of Subjectivity* delves into the nature of experience arguing that unconscious subjectivity is a reality Neisser identifies the biological roots of the first person showing how

ancient systems of animal navigation enable creatures like us to cope with our worldly concerns Beyond the Conscious Mind Thomas R. Blakeslee, 2013-11-11 The Nobel Prize winning work of Roger Sperry revolutionized our understanding of human consciousness by proving that separate thinking and knowledge could exist in the left and right halves of the brain Now popular science writer Thomas Blakeslee author of the highly acclaimed *The Right Brain* takes us to a new level of understanding based on the theory of neural Darwinism by Gerald Edelman another Nobel Prize winner Blakeslee explains that our neurons spontaneously organize into hundreds of groups called modules that compete to respond to every situation in our lives from reading this paragraph to falling in love A vast preponderance of this activity operates outside of our conscious awareness *The Tides of Mind: Uncovering the Spectrum of Consciousness* David Gelernter, 2016-02-22 A rock star New York Times of the computing world provides a radical new work on the meaning of human consciousness The holy grail of psychologists and scientists for nearly a century has been to understand and replicate both human thought and the human mind In fact it is what attracted the now legendary computer scientist and AI authority David Gelernter to the discipline in the first place As a student and young researcher in the 1980s Gelernter hoped to build a program with a dial marked focus At maximum focus the program would think rationally formally reasonably As the dial was turned down and focus diminished its mind would start to wander and as you dialed even lower this artificial mind would start to free associate eventually ignoring the user completely as it cruised off into the mental adventures we know as sleep While the program was only a partial success it laid the foundation for *The Tides of Mind* a groundbreaking new exploration of the human psyche that shows us how the very purpose of the mind changes throughout the day Indeed as Gelernter explains when we are at our most alert when reasoning and creating new memories is our main mental business the mind is a computer like machine that keeps emotion on a short leash and attention on our surroundings As we gradually tire however and descend the mental spectrum reasoning comes unglued Memory ranges more freely the mind wanders and daydreams grow more insistent Self awareness fades reflection blinks out and at last we are completely immersed in our own minds With far reaching implications Gelernter's landmark *Spectrum of Consciousness* finally helps decode some of the most mysterious wonders of the human mind such as the numinous light of early childhood why dreams are so often predictive and why sadism and masochism underpin some of our greatest artistic achievements It is a theory that also challenges the very notion of the mind as a machine and not through empirical studies or hard science but by listening to our great poets and novelists who have proven themselves as humanity's most trusted guides to the subjective mind and inner self In the great introspective tradition of Wilhelm Wundt and Ren Descartes David Gelernter promises to not only revolutionize our understanding of what it means to be human but also to help answer many of our most fundamental questions about the origins of creativity thought and consciousness *Reduction and Qualia* Douglas R. Sinclair, 1994 *Little Study of Objective and Subjective Mind* Abby Jane Taylor, 1903 Phenomenal Consciousness Dimitris Platchias, 2014-12-05 How can the fine grained phenomenology of

conscious experience arise from neural processes in the brain How does a set of action potentials nerve impulses become like the feeling of pain in one s experience Contemporary neuroscience is teaching us that our mental states correlate with neural processes in the brain However although we know that experience arises from a physical basis we don t have a good explanation of why and how it so arises The problem of how physical processes give rise to experience is called the hard problem of consciousness and it is the contemporary manifestation of the mind body problem This book explains the key concepts that surround the issue as well as the nature of the hard problem and the several approaches to it It gives a comprehensive treatment of the phenomenon incorporating its main metaphysical and epistemic aspects as well as recent empirical findings such as the phenomenon of blindsight change blindness visual form agnosia and optic ataxia mirror recognition in other primates split brain cases and synaesthesia

Origins of Objectivity

Tyler Burge,2010-03-04 Tyler Burge presents an original study of the most primitive ways in which individuals represent the physical world By reflecting on the science of perception and related psychological and biological sciences he gives an account of constitutive conditions for perceiving the physical world and thus aims to locate origins of representational mind

Consciousness Demystified Todd E. Feinberg,Jon M. Mallatt,2018-09-25 Demystifying consciousness how subjective experience can be explained by natural brain and evolutionary processes Consciousness is often considered a mystery How can the seemingly immaterial experience of consciousness be explained by the material neurons of the brain There seems to be an unbridgeable gap between understanding the brain as an objectively observed biological organ and accounting for the subjective experiences that come from the brain and life processes In this book Todd Feinberg and Jon Mallatt attempt to demystify consciousness to naturalize it by explaining that the subjective experiencing aspects of consciousness are created by natural brain processes that evolved in natural ways Although subjective experience is unique in nature they argue it is not necessarily mysterious We need not invoke the unknown or unknowable to explain its creation Feinberg and Mallatt flesh out their theory of neurobiological naturalism after John Searle s biological naturalism that recognizes the many features that brains share with other living things lists the neural features unique to conscious brains and explains the subjective objective barrier naturally They investigate common neural features among the diverse groups of animals that have primary consciousness the type of consciousness that experiences both sensations received from the world and affects such as emotions They map the evolutionary development of consciousness and find an uninterrupted progression over time without inserting any mysterious forces or exotic physics Finally bridging the previously unbridgeable they show how subjective

experience although different from objective observation can be naturally explained **Landscapes in My Mind** Vincenzo R. Sanguineti, 1999 Eritrean born Sanguineti psychiatry Jefferson Medical College Philadelphia took part in anthropology and civil engineering projects in Africa before coming to the US He explores the elusive and apparently ever changing quality of subjective experiences a quality that has put subjectivity at odds with traditional mental science and relegated to art and literature He argues that all conscious thoughts emerge from processes that are largely not conscious and that data for global knowledge have different origins are weighted by affective elements and are continually available and potentially active during all mental activity **Objectivity** William Earle, 1955 **Subjective Reality 101** Steve Pavlina, Angus Baynham-McColl, 2017-06-27 Subjective Reality 101 is a crash course in the perspective of subjective reality What is subjective reality Here s the way I m using this term Subjective reality is an integrated belief system where consciousness and awareness are primary They are the container in which everything else exists And I do mean EVERYTHING One way of thinking about subjective reality is like a holodeck from Star Trek But that s a model I d like to move away from because I m finding most people are thinking about it too objectively as if the holodeck still exists in an objective universe somewhere out there This would be the world of The Matrix movies but that is not subjective reality In that case you re just having a simulated subjective experience within a larger objective framework In those movies you still have an outside objective universe that is real So this isn t the model we want to use In a truly subjective universe there is nothing outside your own consciousness no world no bodies no brain Suppose I ask you the question If a tree falls in the forest and no one is there to hear it does it make a sound With an objective belief structure you might say yes but you might also say no depending on your views on quantum physics However if you believed in subjective reality you have to reject the question entirely You d say that there s no such thing as a tree outside your awareness That tree doesn t even exist Nor does the forest for that matter If you are not there to observe it it doesn t exist at all Without consciousness there is no existence So in this paradigm you are not a body with a mind walking around in a physical universe You are pure conscious awareness and the physical universe is walking around within you And that includes what you think of as your body and your mind too as well as every other body you perceive A secondary element is that within a subjective universe thought is the primary creative element All thoughts manifest in some form whether conscious or unconscious So the physical universe is like a giant computer crunching your thoughts into reality Thoughts are waves and the physical universe is the summation of all those waves Hence where there is no thought there is no physical existence If a thought does not exist its physical manifestation does not exist either
