The

Social Context of Cognitive Development Mary Gauvain, 2001-01-01 Traditional approaches to cognitive development can tell us a great deal about the internal processes involved in learning Sociocultural perspectives on the other hand provide valuable insights into the influences on learning of relationship and cultural variables This volume provides a much needed bridge between these disparate bodies of research examining the specific processes through which children internalize the lessons learned in social contexts The book reviews current findings on four specific domains of cognitive development attention memory problem solving and planning The course of intellectual growth in each domain is described and social factors that support or constrain it are identified The focus throughout is on how family peer and community factors influence not only what a child learns but also how learning occurs Supporting her arguments with solid empirical data the author convincingly shows how attention to sociocultural factors can productively complement more traditional avenues of investigation

Fischer, 2014-02-04 In this volume leading developmentalists address the question of how children's thinking develops in context by drawing on the theories of Vygotsky Gibson and Piaget Analyses of the ecology and the dynamics of behavior have become popular emphasizing the particulars of people acting in specific environments and the many complex factors of human body and mind that contribute to action and thought This volume brings together many of the current efforts to deal with development in this richly ecological dynamic way The research reported demonstrates that recent years have produced major shifts in approach Activities are studied as they naturally occur in everyday contexts Children's active construction of the world around them is treated as fundamentally social in nature occurring in families with peers and in cultures Behavior is studied not as something disembodied but within a rich matrix of body emotion belief value and physical world Behavior is analyzed as changing dynamically not only over seconds and minutes but over hours days and years

Development Through the Lifespan Allyn & Bacon, Incorporated, Laura E. Berk, 2000-08

*Development of Person-context Relations* Thomas A. Kindermann, Jaan Valsiner, 2013-06-17 Traditionally developmental psychology has its focus on individuals Developmentalists aim to describe regularities in individuals change and development across time to explain the processes and mechanisms that are involved in producing change and regularity and eventually to design

strategies for optimization and modification of developmental pathways Although the role of contexts has always been of central concern for these purposes it is nevertheless quite surprising to note that compared to the effort devoted to individuals relatively little attention has been paid to the study of the nature and organization of their contexts This volume is an exploration of the idea that how we describe and explain human development will be closely tied to our understanding of what contexts are how individuals and contexts become influential for one another what contexts do to and with individuals and how contexts and their influences change themselves across time A major theme is whether the traditional dichotomy between individuals and their contexts may be artificial perhaps culturally biased and after psychologists have adhered to it for about a century may have become an impediment to increasing our understanding of developmental processes With this volume the editors contribute a serious consideration of development and systematic change to emerging models of person context relations and provide suggestions about how it may be possible to incorporate these notions in developmental research and theorizing

*The Development of the Mediated Mind* Joan M. Lucariello, Judith A. Hudson, Robyn Fivush, Patricia J. Bauer, 2004-07-19 This volume is a festschrift for Katherine Nelson an NYU professor who was a pioneer in infant perception and memory The mediated mind is a term coined by Dr Nelson and it refers to how cognitive development is mediated by the sociocultural context including language and social interaction The impact of Nelson's views on the sociocultural basis of cognition and her functionalist perspective on cognitive development are evident in the collection of chapters in this book The contributors all leaders in the field of cognitive development examine ways in which cognition is embedded in everyday meaningful activities and the role of social context and cultural symbol systems such as language and text influence children's developing concepts and thought The concept of the mediated mind is examined from a variety of perspectives including research in concept development memory development language learning the development of literacy narrative analysis and children's theory of mind The significant contribution of this volume is that it addresses all aspects of the mediated mind Memory both autobiographical and event semantic theory of mind mental representation temporality narrative and metalinguistic awareness comprise the chapter topics The breadth of topics represented is a tribute to the impact Nelson's vision has on many developmental domains The contributors acknowledge and honor her work Her theory and research paved the way for the advances in understanding a mediated mind that are evident and that will continue to shape notions of how the human mind develops and evolves within a social interactive world

**Environmental Influences on Theory of Mind Development** Virginia Slaughter, Marc De Rosnay, 2017 Theory of Mind Development in Context is the first book of its kind to explore how children's environments shape their theory of mind and in turn their ability to interact effectively with others Based on world leading research and inspired by the ground breaking work of Candida Peterson the original collected chapters demonstrate that children's understanding of other people is shaped by their everyday environment Specifically the chapters illustrate how theory of mind development varies with broad cultural context

socioeconomic status institutional versus home rearing family size parental communication style and aspects of schooling The volume also features research showing that by virtue of their condition children who are deaf or who have an autism spectrum disorder function in environments that differ from those of typical children and this in turn influences their theory of mind Although much important research has emphasized the role of nature in theory of mind development this book highlights that children s understanding of other people is nurtured through their everyday experiences and interactions This perspective is essential for students researchers and practitioners to gain a complete understanding of how this fundamental skill develops in humans The book is invaluable for academic researchers and advanced students in developmental psychology education social psychology cognitive psychology and the social sciences as well as practicing psychologists counselors and psychiatrists particularly those who deal with disorders involving social and or communicative deficits
