Ebook Crash Warning Systems Interface Insights:

Crash Warning Systems Lillian Bryant, 2015 A comprehensive review and analysis of the human factors research associated with the implementation of crash warning system interfaces has led to the development of guidelines intended to be used by anyone responsible for the conceptualisation development design testing or evaluation of in vehicle crash avoidance systems especially for forward collision headway warning lane change blind spot warning and road departure warnings This book is intended to highlight issues to be addressed and provide guidance in the development of Collision Warning Systems CWSs Information is presented on a variety of topics relevant to the driver vehicle interface DVI of CWS devices *Network World* ,1999-12-06 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce *Crash Warning System Interfaces* ,2007 The specific objectives of this handbook are to develop a set of clear relevant and easy to use lessons learned that can be used to support the development of the Driver Vehicle Interface DVI of near term Collision Warning Systems CWS 1 building on the 1996 effort conducted by Comsis determine the current state of human factors knowledge applicable to DVI development i e controls displays message content 2 to support the IVBSS program develop guidelines for the integration of forward collision headway warning lane change blind spot warning and road departure warnings 3 identify additional research that is needed to fill existing gaps in the knowledge base 4 focus on passenger vehicles but include information relevant to heavy trucks and buses P 3 Power point overview **Popular Science** ,2003-12 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better *Popular Science* ,2002-12 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better **Road/Lane Departure Warning Systems: Information for the Human Interface** Safety and Human Factors Standards Steering Committee, 2007 The Road Lane Departure Warning System is a crash avoidance technology which warns drivers if they are drifting or have drifted out of their lane or from the road This warning system is designed to help prevent the possibility of a run off road crash This system will not take control of the vehicle it will only let the driver know that he she needs to steer back into the lane This warning system is not designed as a lane change monitor which addresses intentional lane changes or a merging system which warns of other vehicles This informational report applies to OEM and after market Road Lane Departure warning systems for light duty vehicles on relatively straight roads with a radius of curvature of 500 m or more and under good weather conditions

Future revisions should consider the implications of newer variations on the user experience Detailed human interface recommendations do not currently exist for road or lane departure warning systems Knowledge of driver behavior regarding in vehicle warning systems has not yet been compiled into a document specifically for road or lane departure warnings The information given in this report will assist designers in the creation of the human interface for road lane departure warning systems

Human Factors in Forward Collision Warning Systems: Operating Characteristics and User Interface Requirements Daniel V. McGehee, J. Salinger, R. J. Kiefer, David J. LeBlanc, 2001 Final Report, 2000 **Human Factors in Forward Collision Warning Systems: Operating Characteristics and User Interface Requirements** Advanced Driver Assistance Systems (ADAS) Committee, 2003 Forward Collision Warning FCW systems are onboard systems intended to provide alerts to assist drivers in avoiding striking the rear end of another moving or stationary motorized vehicle This SAE Information Report describes elements for a FCW operator interface as well as requirements and test methods for systems capable of warning drivers of rear end collisions This information report applies to original equipment and aftermarket FCW systems for passenger vehicles including cars light trucks and vans This report does not apply to heavy trucks Furthermore this document does not address integration issues associated with adaptive cruise control ACC and consequently aspects of the document could be inappropriate for an ACC system integrated with a FCW system

Development of Performance Specifications for Collision Avoidance Systems for Lane Change, Merging and Backing.
Task 3: Human Factors Assessment of the Drivers Interfaces of Existing Collision Avoidance Systems. Technical Report Elizabeth N. Mazzae, 1995 Integrated Vehicle-based Safety Systems (IVBSS), 2008 The IVBSS program is a four year two phase project to design and evaluate an integrated crash warning system for forward collision lateral drift lane change merge and curve speed warnings for both light vehicles and heavy trucks This report covering human factors research and DVI development in the first two years of the program describes five laboratory studies four driving simulator studies and two onroad pilot tests conducted to assess a variety of driver interface concepts related to the development of integrated warning systems Selected major findings are as follows 1 For the vehicles selected warning sounds should be at least 80 dB A in the 1 to 5 KHz range 2 Auditory warning durations should be less than the expected mean response time 3 No approaches to warning combination single dual simple dual hybrid or multiple warnings led to noticeably better driver responses though drivers favored the multiple warning approach least and for a variety of reasons a dual warning approach is recommended for IVBSS 4 Delays between 150 and 300 ms are acceptable for the LDW algorithm 5 No single prioritization scheme for warnings simultaneous priority interrupt or delayed presentation is recommended based on the findings from a simulator study Extended pilot testing is likely to suggest minor refinements to the DVIs developed here In the pilot tests that have been conducted all of the warning systems operated as planned with some changes required to reduce false alarm rates Overall drivers reported IVBSS to be intuitive and easy to use Most drivers stated warnings were received with about the

right frequency and in general the warnings were not distracting Results from the laboratory and simulator experiments in particular are likely to assist future developers of driver vehicle interfaces for integrated crash warning systems

In-vehicle Crash Avoidance Warning Systems Richard W. Huey,1997 *Object Detection, Collision Warning, and Avoidance Systems* Ronald K. Jurgen,2007 Contains 51 papers covering eight years of research on object detection collision warning and collision avoidance Topics covered include Parking aids Target tracking with cameras Sensor combinations Blind spot detection Imager chips Lane tracking Lane and road departure warning Sensor fusion Intersection collision warning Front and rear end crash avoidance Automatic collision avoidance systems Braking systems for collision avoidance and Driver vehicle interface requirements **Object Detection, Collision Warning, and Avoidance Systems** Ronald K. Jurgen,Society of Automotive Engineers,1998-01-01 A compilation of papers and journal articles that cover research and development of electronic devices and their use in object detection collision warning and avoidance systems The papers included in this book cover the pros and cons of each of the three systems **Emergency Alert and Warning Systems** National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Committee on the Future of Emergency Alert and Warning Systems: Research Directions,2018-04-19 Following a series of natural disasters including Hurricane Katrina that revealed shortcomings in the nation s ability to effectively alert populations at risk Congress passed the Warning Alert and Response Network WARN Act in 2006 Today new technologies such as smart phones and social media platforms offer new ways to communicate with the public and the information ecosystem is much broader including additional official channels such as government social media accounts opt in short message service SMS based alerting systems and reverse 911 systems less official channels such as main stream media outlets and weather applications on connected devices and unofficial channels such as first person reports via social media Traditional media have also taken advantage of these new tools including their own mobile applications to extend their reach of beyond broadcast radio television and cable Furthermore private companies have begun to take advantage of the large amounts of data about users they possess to detect events and provide alerts and warnings and other hazard related information to their users More than 60 years of research on the public response to alerts and warnings has yielded many insights about how people respond to information that they are at risk and the circumstances under which they are most likely to take appropriate protective action Some but not all of these results have been used to inform the design and operation of alert and warning systems and new insights continue to emerge Emergency Alert and Warning Systems reviews the results of past research considers new possibilities for realizing more effective alert and warning systems explores how a more effective national alert and warning system might be created and some of the gaps in our present knowledge and sets forth a research agenda to advance the nation s alert and warning capabilities

Development and Validation of Functional Definitions and Evaluation Procedures for Collision Warning/avoidance

Systems R. Kiefer,1999 *Development of Performance Specifications for Collision Avoidance Systems for Lane Change, Merging and Backing* Elizabeth N. Mazzae,1996 **Recommended Objective Test Procedures for Road Departure Crash Warning Systems** nist,2013-11-30 Under the auspices of the Department of Transportation Intelligent Vehicle Initiative the National Highway Traffic and Safety Administration NHTSA is evaluating the safety benefits of Road Departure Crash Warning Systems RDCWS These systems warn inattentive drivers when their vehicle is about to depart the road or collide with a roadside obstacle To further understand the capabilities and benefits of these warning systems NHTSA with the assistance of the National Institute of Standards and Technology NIST is devising test procedures that provide performance data in an objective and quantitative manner These tests will evolve to reflect new insight into performance measurement and to maintain pace with the capabilities of the warning systems In the long term these tests may one day become part of a standard procedure developers follow to achieve a safety rating similar to the 5 star ratings used in the automotive industry today **An Independent Measurement System for Testing Automotive Crash Warning Systems** Sándor Szabó,2009 *Integrated Vehicle-based Safety Systems Light-vehicle Field Operational Test Key Findings Report* ,2011 This document presents key findings from the light vehicle field operational test conducted as part of the Integrated Vehicle Based Safety Systems program These findings are the result of analyses performed by the University of Michigan Transportation Research Institute to examine the effects of a prototype integrated crash warning system on driving behavior and driver acceptance The light vehicle platform included four integrated crash warning subsystems forward crash lateral drift lane change merge crash and curve speed warnings installed on a fleet of 16 passenger cars and operated by 108 randomly sampled drivers for a period of six weeks each Each car was instrumented to capture detailed data on the driving environment driver behavior warning system activity and vehicle kinematics Data on driver acceptance was collected through a post drive survey debriefings and focus groups Key findings indicate that use of the integrated crash warning system resulted in improvements in lane keeping fewer lane departures and increased turn signal use The research also indicated that drivers were slightly more likely to maintain shorter headways with the integrated system No negative behavioral adaptation effects were observed as a result of drivers involvement in secondary task behaviors Drivers generally accepted the integrated crash warning system and 72 percent of all drivers said they would like to have an integrated warning system in their personal vehicles Drivers also reported that they found the blind spot detection component of the lane change merge crash warning system to be the most useful and satisfying aspect of the integrated system
