Remote Sensing Land Surface Changes Felix Kogan,2023-02-22 This book discusses the detrimental consequences of climate related land changes over a 40 year period between 1981 and 2020 and focuses on how climate warming is deteriorating the agricultural system due to excessive heat lack of moisture and more intensive and widespread droughts leading to a reduction of agricultural production Most of the existing literature on the unfavourable consequences of global warming for land are based on a relatively short period of weather station data covering local land areas with limited networks and monitoring parameters These concerns have led to the use of satellite data whose measurements are controlled by such vegetation characteristics as chlorophyll carotenoids

moisture contents in the plants and temperature inside the vegetation community Therefore the discussion of this book is completely based on high resolution global land surface measurements by the sensors on the National Oceanic and Atmospheric Administration's NOAA operational afternoon polar orbiting satellites The book also focuses on understanding climate change impacts on land changes where humans are living and combines biophysically grounded methods and the 40 year data to develop models for monitoring large scale Earth warming impacts on land and for timely prediction of climate consequences for humans These 40 year trends in land characteristics will help to better inform the assessment of potential changes in the future and how to reach human sustainability The book will of interest to scientists using satellite remote sensing to track climate change impacts on land over time as well as students and researchers in climatology and environmental sustainability

Beyond Physicalism Edward F. Kelly, Adam Crabtree, Paul Marshall, 2015-02-19 The rise of modern science has brought with it increasing acceptance among intellectual elites of a worldview that conflicts sharply both with everyday human experience and with beliefs widely shared among the world's great cultural traditions Most contemporary scientists and philosophers believe that reality is at bottom purely physical and that human beings are nothing more than extremely complicated biological machines On such views our everyday experiences of conscious decision making free will and the self are illusory by products of the grinding of our neural machinery It follows that mind and personality are necessarily extinguished at death and that there exists no deeper transpersonal or spiritual reality of any sort Beyond Physicalism is the product of an unusual fellowship of scientists and humanities scholars who dispute these views In their previous publication Irreducible Mind they argued that physicalism cannot accommodate various well evidenced empirical phenomena including paranormal or psi phenomena postmortem survival and mystical experiences In this new theory oriented companion volume they go further by attempting to understand how the world must be constituted in order that these rogue phenomena can occur Drawing upon empirical science metaphysical philosophy and the mystical traditions the authors work toward an improved big picture of the general character of reality one which strongly overlaps territory traditionally occupied by the world's institutional religions and which attempts to reconcile science and spirituality by finding a middle path between the polarized fundamentalisms religious and scientific that have dominated recent public discourse Contributions by Harald Atmanspacher Lorilai Biernacki Bernard Carr Wolfgang Fach Michael Grosso Michael Murphy David E Presti Gregory Shaw Henry P Stapp Eric M Weiss and Ian Whicher
