Piovosio,1994 **Deep Learning and Artificial Intelligence: A Beginners' Guide to Neural Networks and Deep Learning** John Slawo,2019-07-24 Welcome to this book on Deep Learning and Neural Networks We re going to be diving into what neural networks are what the current neural networks out there do with an API Once we go over how everything works and how each of these new technologies work we will go over the many different applications in general life and business There have been a lot of news stories about how there are going to be self driving cars machines that make their own products and many other different applications of neural networks that make it sound like a vastly complicated machine However the tool of the neural network is a very simple tool When you hear about the applications that are being created that utilize neural networks you are actually hearing about the amount of work that went behind making a neural network do something that s complicated but not a complicated neural network Neural networks are extremely easy to understand as you will find throughout this book but the problem is that people have made them look complicated Therefore let s go ahead and demystify this subject so that you can get into the field of neural networks yourself and have some fun Here s What s Included In This Book What are Neural Networks Biological Neural Networks Artificial Neural Networks Keras Model and Layers Different Deep Learning Algorithms Benefits of Neural Networks Business Applications of Neural Networks

Applied Neural Networks with TensorFlow 2 Orhan Gazi Yalçın,2021 Implement deep learning applications using TensorFlow while learning the why through in depth conceptual explanations You ll start by learning what deep learning offers over other machine learning models Then familiarize yourself with several technologies used to create deep learning models While some of these technologies are complementary such as Pandas Scikit Learn and Numpy others are competitors such as PyTorch Caffe and Theano This book clarifies the positions of deep learning and Tensorflow among their peers You ll

then work on supervised deep learning models to gain applied experience with the technology A single layer of multiple perceptrons will be used to build a shallow neural network before turning it into a deep neural network After showing the structure of the ANNs a real life application will be created with Tensorflow 2.0 Keras API Next you'll work on data augmentation and batch normalization methods Then the Fashion MNIST dataset will be used to train a CNN CIFAR10 and Imagenet pre trained models will be loaded to create already advanced CNNs Finally move into theoretical applications and unsupervised learning with auto encoders and reinforcement learning with tf agent models With this book you'll delve into applied deep learning practical functions and build a wealth of knowledge about how to use TensorFlow effectively You will Compare competing technologies and see why TensorFlow is more popular Generate text image or sound with GANs Predict the rating or preference a user will give to an item Sequence data with recurrent neural networks
