LTE Small Cell Optimization Harri Holma, Antti Toskala, Jussi Reunanen, 2016 LTE network capabilities are enhanced with small cell deployment with optimization and with new 3GPP features LTE networks are getting high loaded which calls for more advanced optimization Small cells have been discussed in the communications industry for many years but their true deployment is happening now New 3GPP features in Release 12 and 13 further push LTE network performance This timely book addresses R Latest 3GPP evolution to Release 13 and LTE optimization and learnings from the field \*Design and Deployment of Small Cell Networks\* Alagan Anpalagan, Mehdi Bennis, Rath Vannithamby, 2016 A comprehensive one stop resource for understanding small cell networks from fundamental concepts to emerging trends design tools challenges and solutions \*Small Cell Networks\* Tony Q. S. Quek, 2013-05-02 Explores state of the art advances in the successful deployment and operation of small cell networks \*Deep-Learning Based Self-Optimization in 5G Small Cell Networks\*, 2020

Interactions Study of Self Optimizing Schemes in LTE Femtocell Networks Kais Abdelrazeg El-murtadi Suleiman, 2012 One of the enabling technologies for Long Term Evolution LTE deployments is the femtocell technology By having femtocells deployed indoors and closer to the user high data rate services can be provided efficiently. These femtocells are expected to be depolyed in large numbers which raises many technical challenges including the handover management In fact managing handovers in femtocell environments with the conventional manual adjustment techniques is almost impossible to keep pace with in such a rapidly growing femtocell environment Therefore doing this automatically by implementing Self Organizing Network SON use cases becomes a necessity rather than an option However having multiple SON use cases operating simultaneously with a shared objective could cause them to interact either negatively or positively. In both cases designing a suitable coordination policy is critical in solving negative conflicts and building upon positive benefits In this work we focus on studying the interactions between three self optimization use cases aiming at improving the overall handover procedure in LTE femtocell networks These self optimization use cases are handover Call Admission Control CAC and load balancing We develop a comprehensive unified LTE compliant evaluation environment This environment is extendable to other radio access technologies including LTE Advanced LTE A and can also be used to study other SON use cases Various recommendations made by main bodies in the area of femtocells are considered including the Small Cell Forum the Next Generation Mobile Networks NGMN alliance and the 3rd Generation Partnership Project 3GPP Additionally traffic sources are simulated in compliance with these recommendations and evaluation methodologies We study the interaction between three representative handover related self optimization schemes We start by testing these schemes separately in order to make sure that they meet their individual goals and then their mutual interactions when operating simultaneously Based on these experiments we recommend several guidelines that can help mobile network operators and researchers in designing better coordination policies Practical Guide to LTE-A, VoLTE and IoT Ayman ElNashar, Mohamed A.
