[Assessment of Next Generation Sequencing \(NGS\) and targeted NGS \(tNGS\) in the Diagnosis of Infectious Diseases, volume III](#) Li Ang,Xin Zhou,Beiwen Zheng,Yair Dorsett,2025-06-18 Given the success of Improving the Clinical Effectiveness of Metagenomic Next Generation Sequencing mNGS in Infection Disease Diagnosis and Treatment Linking the NGS Specialists and Clinicians series of article collections and the rapidly evolving subject area we are pleased to announce the launch of Volume III Rapid and accurate diagnosis is crucial for the effective treatment of infectious diseases Metagenomics using next

generation sequencing NGS or targeted NGS tNGS by enriching and sequencing specific regions of microbial genomes can directly analyze mixed genomic materials from bacteria viruses fungi parasites and hosts in clinical samples This provides immense potential for cost reduction and faster turnaround times ranging from 12 to 24 hours without the need for a clinical hypothesis Although NGS still faces technical and practical challenges it has been used in clinical practice especially for critically ill patients in intensive care units who show no response to anti infective therapies At this stage it is crucial to focus on the accuracy of pathogens identification in NGS reports for downstream clinical decision making such as adjusting anti infective therapies or excluding infectious diseases in cases with negative reports Therefore the specificity of the reported pathogens should be comprehensively assessed by combining multiple clinical tests and processes **Novel Technologies**

**Applied to Flavoromics and Sensory Evaluation of Foods** Geraldine M. Dowling, Michel Aliani, 2025-01-27 Sensory evaluation is the science of eating quality that uses scientific methods to evaluate the human response to the aroma appearance texture and flavor of food Flavoromics is derived from the fields of chemometrics and a wide range of analytical techniques to provide data on a diverse sample set to understand complex problems related to flavor formation in foods Chemometrics can be deemed an essential approach for the differentiation of similar samples that require authentication by authorities For instance recent advances through the dissemination of fingerprinting strategies have enabled the study of many factors that influence food product preferences There is a need for innovative analytical approaches in the flavoromics and sensory analysis fields to investigate the quality of foods Chemometrics and artificial intelligence AI can be deemed essential approaches for the proper implementation of flavoromics studies **Application of Network Theoretic**

**Approaches in Biology** Rinku Sharma, Josh Clevenger, Mallana Gowdra Mallikarjuna, Sudepto Bhattacharya, Manish Kumar Pandey, 2023-08-25 The biological complexity essentially includes and involves processes that are mediated through explicitly non linear interactions that are often typically entangled in nature These comprise a myriad of interactions among a vast number of entities such as genes proteins metabolites and species widely varying in scale These interactions render biological systems across spatial and temporal scales as complex adaptive systems having features like self organisation modularity emergence non linear interactions collective response and adaptation The theory of complex networks offers an appropriate formal framework for modelling such complex systems The enormous wealth of biological data generated by high throughput techniques as also through empirical investigations can be analysed using the aforementioned formal framework to obtain important insights into biological complexity The concept of networks can be used 1 to explore the relationships between entities resulting in network generation 2 to guide the analytic procedure based on existing network s as prior knowledge and 3 to analyze the prior network s regarding their topology and attributes Complex networks being ubiquitous permeate the biological systems across spatial and temporal scales The objective of this collection is to highlight some very salient features of such inherent complexity in biological systems by adopting a network theoretic perspective The

anticipated pay off is obtaining a deeper insight explicitly into the systems level interactions and the emergent complex behaviour of the systems Also investigating the propulsive forces which lend various networks with akin topological characteristics that would help to merge vivid information related to various molecular interactions into a single framework thereby permitting a structural perspective of the cellular dynamics The application may include exploring the disease environmental stress response and trait mechanism using different omics platforms candidate gene discovery and validation network guided discovery and deployment of omics approaches in biology modern genetic improvement methods for delivering genes in addition to high throughput and precise phenotyping methodologies exploring the disease environmental stress response mechanism marker re prioritization network guided biomarker discovery etc
