*Surface Operations in Petroleum Production, II* J.O. Robertson, G.V. Chilingarian, S. Kumar, 1989-07-01 This second volume of *Surface Operations in Petroleum Production* complements and amplifies Volume I which appeared in 1987 and covered several aspects of oilfield technology This second volume presents a detailed theoretical and practical exposition of surface oilfield practices including gas flow rate measurement cementing fracturing acidizing and gravel packing In today's era of specialization these operations are generally left to service companies denying field engineers and company managers direct detailed knowledge of the specific surface and subsurface operations This book presents a comprehensive analysis which may be used by field engineers to analyze technical problems specify the required surface and subsurface operations and closely supervise the service company's work and post treatment operation of the well Another subject which has great economic consequences in all oilfields is corrosion of equipment The book presents a comprehensive analysis of the theory of corrosion in the oilfield and methods that have proved effective for the retardation or elimination of corrosion Quality control of injection waters is then covered Three more topics are addressed the first is offshore technology which is presented with reference to onshore oilfield operations making a lucid presentation for field engineers who have no practical knowledge of the subject The second is pollution control an area of oilfield management which has assumed widespread importance in recent years The last topic covered is the subject of underground storage of gas and oil Underground fuel storage and retrieval is an active area of oilfield production management that utilizes the technology presented in this entire treatise Finally the technology of testing petroleum products and sample experiments for junior and senior petroleum engineering students are presented This two volume comprehensive treatise on modern oilfield technology thus provides not only a complete reference for field managers engineers and technical consultants but will also serve academic needs in advanced studies of petroleum production engineering *Metallurgical Coatings 1988* R Krutenat, 2012-12-02 *Metallurgical coatings 1988* is a compilation of the proceedings of the 15th International Conference on Metallurgical Coatings This volume is

divided into four parts which deal with synthesis and properties of coatings used in microelectronic applications methods of characterizing coatings and modified surfaces protective coatings for magnetic and optical thin film media and thick and thin film sensors The first part of this volume is further subdivided into five sections focusing on thin film barrier layers metallization for VLSI circuits thin films used in packaging technology new materials and emerging technologies and synthesis and microstructure of high Tc superconductors The second part is also subdivided into four sections each presenting different methods such as the surface and thin film analysis techniques microstructural characterization techniques mechanical properties of films and coatings and non destructive characterization techniques Part three discusses the preparation and characterization of reactively sputtered silicon nitride thin films the bond structures and properties of chemically vapor deposited amorphous SiC and the wear of Co Ni thin film magnetic recording tape against metallic and ceramic surfaces Finally this volume explores the insert mounted thin film sensors for real time
