**EdPsych Modules** Cheryl Cisero Durwin,Marla Reese-Weber,2016-12-01 Now with

SAGE Publications Cheryl Cisero Durwin and Marla Reese Weber's EdPsych Modules uses an innovative implementation of case studies and a modular format to address the challenge of effectively connecting theory and research to practice. Each module is a succinct stand-alone topic that represents every subject found in traditional chapter texts and can be used in any order for maximum flexibility in organizing your course. Each of the book's eight units of modules begins with a set of four case studies: early childhood, elementary, middle school, and secondary, and ends with Assess and Reflect and Evaluate questions and activities to encourage comprehension and application of the research and theories presented. The case approach and the extensive pedagogy that support it allows students to constantly see the applications of the theories and research that they are studying in the text.

**Nonfiction Reading Power** Adrienne Gear, 2008. Help students think while they read in all subject areas with the key skills of connecting, questioning, visualizing, inferring, and synthesizing.

An Intellectual History of Science in the Renaissance Raffaele Pisano, 2025-09-09. This second of a two-part volume. Book II extends the historical scientific inquiry of first part volume Book I by considering other specific case studies within cultural, fundamental, technological frameworks. An intellectual cultural history of science technology examines how human and their applied sciences experiences have been expressed in and trained by ideas and technologies. The contributors explain ways in which the sciences allowed advanced modelling on the one hand and the development of new technological ideas on the other hand, including methods and theories, institutions, engineering, devices, instrumentation, and social implications, as well. Taking into account the excellence of the essays, the book covers several branches and disciplines in science technology, e.g., theoretical mathematics and the empirical work, machinery and mechanisms, stored information, transportation, inquiring methods in history and historiography of science technology. It describes the ways it differently accounted for variation in unlike contexts and consequently how its results remain still nowadays a debated question as well as due to constraints preventing an extensive exploration of its remarkable historiography. The book gathers selected and double peer review contributions by historians of physics, mathematics, engineering, science, as new perceptions of the history of science during the Renaissance, ranging across several fields of science within its fundamental cultural technological history. The volume is an accessible avenue to understanding cultural ideas, technologies, by leading authorities who offer much needed historical insights into the field of and intellectual history of science technology. It provides an absorbing and revealing read for historians, philosophers, and scientists alike.
