A 3D glass prism is positioned centrally, refracting a beam of white light into a vibrant rainbow spectrum. The light enters from the right and exits to the left, creating a fan of colors. The prism itself is transparent with visible reflections and refractions on its surfaces. The background is solid black, which makes the colorful light and the metallic-looking text stand out.

The Practice of Enterprise Modeling Geert Poels, Frederik Gailly, Estefania Serral Asensio, Monique Snoeck, 2017-11-14 This volume constitutes the proceedings of the 10th IFIP WG 8.1 Conference on the Practice of Enterprise Modeling held in November 2017 in Leuven Belgium. The conference was created by the International Federation for Information Processing IFIP Working Group 8.1 to offer a forum for knowledge transfer and experience sharing between the academic and practitioner communities. The 20 full papers and 4 short papers accepted were carefully reviewed and selected from 70 submissions. They include research results, practitioner experience reports, and work in progress papers and were presented in 8 sessions covering diverse topics related to enterprise modelling and its application in practice.

Enterprise Architecture, Integration and Interoperability Peter Bernus, Guy Doumeingts, Mark Fox, 2010-08-23 Enterprise Architecture, Integration and Interoperability and the Networked enterprise have become the theme of many conferences in the past few years. These conferences were organised by IFIP TC5 with the support of its two working groups WG 5.12 Architectures for Enterprise Integration and WG 5.8 Enterprise Interoperability, both concerned with aspects of the topic: how is it possible to architect and implement businesses that are flexible and able to change to interact and use one another's services in a dynamic manner for the purpose of joint value creation? The original question of enterprise integration in the 1980s was: how can we achieve and integrate information and material flow in the enterprise? Various methods and reference models were developed or proposed, ranging from tightly integrated monolithic system architectures through cell-based manufacturing to on-demand interconnection of businesses to form virtual enterprises in response to market opportunities. Two camps have emerged in the endeavour to achieve the same goal: namely to achieve interoperability between businesses, whereupon interoperability is the ability to exchange information in order to use one another's services or to jointly implement a service. One school of researchers addresses the technical aspects of creating dynamic and static interconnections between disparate businesses or parts thereof. On the Move to Meaningful Internet Systems: OTM 2009 Workshops Robert Meersman, Pilar Herrero, Tharam Dillon, 2009-11-06 Internet-based information systems: the second covering the large-scale integration of heterogeneous computing systems and data resources with the aim of providing a global computing space. Each of these four conferences encourages researchers to treat their respective topics within a framework that incorporates jointly a theory, b) conceptual design and development, and c) applications in particular case studies and industrial solutions. Following and expanding the model created in 2003, we again solicited and selected quality workshop proposals to complement the more archival nature of the main conferences with research results in a number of selected and more avant-garde areas related to the general topic of Web-based distributed computing. For instance, the so-called Semantic Web has given rise to several novel research areas combining linguistics, information systems technology, and artificial intelligence, such as the modeling of legal regulatory systems and the ubiquitous nature of their usage. We were glad to see

that ten of our earlier successful workshops ADI CAMS EI2N SWWS ORM OnToContent MONET SEMELS COMBEK IWSSA re appeared in 2008 with a second third or even fth edition sometimes by alliance with other newly emerging workshops and that no fewer than three brand new independent workshops could be selected from proposals and hosted ISDE ODIS and Beyond SAWSDL Workshop diences productively mingled with each other and with those of the main c ferences and there was considerable overlap in authors

Coherency Management Gary Doucet, Pallab Saha, Scott Bernard, 2009 The book introduces the idea of Coherency Management and asserts that this is the primary outcome goal of an enterprise s architecture With submissions from over 30 authors and co authors the book reinforces the idea that EA is being practiced in an ever increasing variety of circumstances from the tactical to the strategic from the technical to the political and with governance that ranges from sell to tell The characteristics usages value statements frameworks rules tools and countless other attributes of EA seem to be anything but orderly definable classifiable and understandable as might be hoped given heritage of EA and the famous framework and seminal article on the subject by John Zachman over two decades ago Notably EA is viewed as an Enterprise Design and Management approach adopted to build better enterprises rather than a IT Design and Management approach limited to build better systems Right Sourcing Dijkstra, John Götze, van der Ploeg, 2013 Right Sourcing Enabling Collaboration puts forward the proposal that the modern enterprise must fundamentally rethink its sourcing equation to become or remain viable By presenting perspectives on sourcing from 21 different contributors the editors hope to enable and inspire readers to make better informed decisions Sourcing is a business theme which gets more and more attention But making the right decisions is not easy Sourcing is a wicked problem This book provides valuable insights and concepts that will help to improve decisions with regard to sourcing I would recommend this book to anyone who wants to achieve right sourcing Martin van den Berg Enterprise Architect Co Founder of DYA and author of several books including Dynamic Enterprise Architecture How to Make It Work Sourcing is becoming an increasingly complex task one that requires fundamental changes in management thinking radical new ways in which to communicate and deal with knowledge and a totally new and different view of all the stakeholders In this book leading thinkers in this space do a great job in opening up the reader s mind to possibilities for alternative solutions that integrate the human aspects in everything we do Fran ois Gossieaux Co

President Human 1.0 and author of *The Hyper Social Organization* What most impressed me about this book is the scope of its coverage and the level of academic rigor behind the analysis The broad scope makes this relevant to senior executives concerned with strategy operational executives accountable for results and technologists on the ground The academic rigor gives me confidence that the findings and recommendations are sound This book will be the reference guide for anyone seriously involved in strategic sourcing R Lemuel Lasher Global Chief Innovation Officer CSC Thought provoking occasionally frustrating and timely As the theory of the firm is tested with evolving technology and globalization driving down transaction costs and enabling greater connectivity we are presented with many different possibilities for business operating models By exploring the perspectives of organization economics technology and people this book provides the reader with a compendium of theory ideas and practical tips on Right Sourcing the business of IT and enabling different business models The slightly idiosyncratic nature of a book with contributions from different authors only serves to engage the reader in the discussion I hope the editors find a way to continue this discussion beyond the book Adrian Apthorp Head of Enterprise Architecture DHL Express Europe The pursuit of sustainable development is one of the greatest challenges of our time For this to succeed we must transform our current linear economy to a circular one This calls for better coordination and collaboration between all players in product chains Right sourcing people products and services is becoming an increasingly important topic therefore This book provides the reader valuable insights and food for thought on right sourcing and collaboration Prof Dr H H F Wijffels
