Boundaries of Evolution Theodore R. Johnstone, M.D., 2014-08-30 *Boundaries of Evolution* describes the unlikelihood of evolutionary theory to explain how it is supposed to scale three major biological cliffs. The first cliff is the need for a logical explanation of how random chemical reactions could produce the first living cell from the primordial soup. The second is the problem of explaining how the first single celled eukaryote evolved from a prokaryote. Mathematical improbabilities of evolutionary theory to scale the first two cliffs in the time available are demonstrated. The third insurmountable cliff is the necessity for a reasonable explanation of how millions of different kinds of multi celled eukaryotes could have quickly evolved from single celled eukaryotes. Random mutations occurring in DNA accepted or rejected by natural selection are hailed as the source of advancement for the increase in biotic complexity. The most common time for mutations to occur in the DNA is during replication. Therefore evolutionary advancement should occur faster in biota with the most frequent replication cycles. If both evolutionary theory and the fossil record are correct prokaryotes which replicate in as little as 20 minutes took 2 billion years to evolve the first single celled eukaryote. Single celled eukaryotes generally having shorter reproductive times than multi celled eukaryotes took another billion years to evolve the first multi celled eukaryote. Then during Cambrian times the multi celled eukaryotes with the longest reproductive cycles literally exploded in diversity in a comparatively short time. How could this be? Other inadequacies of Darwin's theory are presented for everyone to see. *Rethinking History, Science, and Religion* Bernard Lightman, 2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century. Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship. This volume evaluates the utility of the complexity principle in past, present and future scholarship. First put forward by historian John Brooke over twenty five years ago, the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science and religion. *Rethinking History, Science and Religion* brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing, the global history of science, the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model. **273**
