

Does Technology Drive History?

- “The traditional answer was that engineers and inventors had made possible a technological triumph.”
- The academic version of this argument,...claimed that “culture evolves as the amount of energy harnessed per capita is increased,....”
- “...and, that ‘the degree of civilization of any epoch, people, or group of peoples, is measured by ability to utilize energy for human advancement or needs.’”

Does Technology Drive History? Merritt Roe Smith, Leo Marx, 1994-06-02 These thirteen essays explore a crucial historical question that has been notoriously hard to pin down To what extent and by what means does a society's technology determine its political social economic and cultural forms These thirteen essays explore a crucial historical question that has been notoriously hard to pin down To what extent and by what means does a society's technology determine its political social economic and cultural forms Karl Marx launched the modern debate on determinism with his provocative remark that the hand mill gives you society with the feudal lord the steam mill society with the industrial capitalist and a classic article by Robert Heilbroner reprinted here renewed the debate within the context of the history of technology This book clarifies the debate and carries it forward Marx's position has become embedded in our culture in the form of constant reminders as to how our fast changing technologies will alter our lives Yet historians who have looked closely at where technologies really come from generally support the proposition that technologies are not autonomous but are social products susceptible to democratic controls The issue is crucial for democratic theory These essays tackle it head on offering a deep look at all the shadings of determinism and assessing determinist models in a wide variety of historical contexts Contributors Bruce Bimber Richard W Bulliet Robert L Heilbroner Thomas P Hughes Leo Marx Thomas J Misa Peter C Perdue Philip Scranton Merritt Roe Smith Michael L Smith John M Staudenmaier Rosalind Williams DOES TECHNOLOGY DRIVE HISTORY? M. & MARX SMITH (L.), 1994 Technology Matters David E. Nye, 2007-08-24 Discusses in nontechnical language ten central questions about technology that illuminate what technology is and why it matters Technology matters writes David Nye because it is inseparable from being human We have used tools for more than 100 000 years and their central purpose has not always been to provide necessities People excel at using old tools to solve new problems and at inventing new tools for more elegant solutions to old tasks Perhaps this is because we are intimate with devices and machines from an early age as children we play with technological toys trucks cars stoves telephones model railroads Playstations Through these machines we imagine ourselves into a creative relationship with the world As adults we retain this technological playfulness with gadgets and appliances Blackberries cell phones GPS navigation systems in our cars We use technology to shape our world yet we think little about the choices we are making In Technology Matters Nye tackles ten central questions about our relationship to technology integrating a half century of ideas about technology into ten cogent and concise chapters with wide ranging historical examples from many societies He asks Can we define technology Does technology shape us or do we shape it Is technology inevitable or unpredictable Why do experts often fail to get it right How do historians understand it Are we using modern technology to create cultural uniformity or diversity To create abundance or an ecological crisis To destroy jobs or create new opportunities Should the market choose our technologies Do advanced technologies make us more secure or escalate dangers Does ubiquitous technology expand our mental horizons or encapsulate us in artifice These large questions

may have no final answers yet but we need to wrestle with them to live them so that we may as Rilke puts it live along some distant day into the answers

Reading Clocks, Alla Turca Avner Wishnitzer, 2015-07-07 Up until the end of the eighteenth century the way Ottomans used their clocks conformed to the inner logic of their own temporal culture. However, this began to change rather dramatically during the nineteenth century as the Ottoman Empire was increasingly assimilated into the European dominated global economy and the project of modern state building began to gather momentum. In *Reading Clocks*, Alla Turca Avner Wishnitzer unravels the complexity of Ottoman temporal culture and for the first time tells the story of its transformation. He explains that in their attempt to attain better surveillance capabilities and higher levels of regularity and efficiency, various organs of the reforming Ottoman state developed elaborate temporal constructs in which clocks played an increasingly important role. As the reform movement spread beyond the government apparatus, emerging groups of officers, bureaucrats, and urban professionals incorporated novel time related ideas, values, and behaviors into their self consciously modern outlook and lifestyle. Acculturated in the highly regimented environment of schools and barracks, they came to identify efficiency and temporal regularity with progress and the former temporal patterns with the old political order. Drawing on a wealth of archival and literary sources, Wishnitzer's original and highly important work presents the shifting culture of time as an arena in which Ottoman social groups competed for legitimacy and a medium through which the very concept of modernity was defined. *Reading Clocks*, Alla Turca, breaks new ground in the study of the Middle East and presents us with a new understanding of the relationship between time and modernity.

Technology and Place Steven A. Moore, 2011-01-20 Developing sustainable architectural and agricultural technologies was the intent behind Blueprint Farm, an experimental agricultural project designed to benefit farm workers displaced by the industrialization of agriculture in the Rio Grande Valley of Texas. Yet despite its promise, the very institutions that created Blueprint Farm terminated the project after just four years, 1987-1991. In this book, Steven Moore demonstrates how the various stakeholders' competing definitions of sustainability, technology, and place ultimately doomed Blueprint Farm. He reconstructs the conflicting interests and goals of the founders, including Jim Hightower and the Texas Department of Agriculture, Laredo Junior College, and the Center for Maximum Potential Building Systems, and shows how ironically they unwittingly suppressed the self-determination of the very farm workers the project sought to benefit. From the instructive failure of Blueprint Farm, Moore extracts eight principles for a regenerative architecture, which he calls his nonmodern manifesto.

The Conduct of War in the 21st Century Rob Johnson, Martijn Kitzen, Tim Sweijts, 2021-03-02 This book examines the key dimensions of 21st century war and shows that orthodox thinking about war, particularly what it is and how it is fought, needs to be updated. Accelerating societal, economic, political, and technological change affects how we prepare, equip, and organise for war, as well as how we conduct war, both in its low tech and high tech forms, and whether it is with high intensity or low intensity. The volume examines changes in warfare by investigating the key features of the conduct of war during the first decades of the 21st century. Conceptually,

centred around the terms kinetic connected and synthetic the analysis delves into a wide range of topics The contributions discuss hybrid warfare cyber and influence activities machine learning and artificial intelligence the use of armed drones and air power the implications of the counterinsurgency experiences in Iraq Afghanistan and Syria as well as the consequences for law fare and decision making This work will be of much interest to students of military and strategic studies security studies and International Relations Chapters 1 2 5 and 19 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

The Illusory Boundary Martin Reuss, Stephen H. Cutcliffe, 2010-08-06 This compelling new book challenges the view that a clear and unwavering boundary exists between nature and technology Rejecting this dichotomy the contributors show how the history of each can be united in a constantly shifting panorama where definitions of nature and technology alter and overlap

Car Crashes without Cars Paul M. Leonardi, 2012-08-24 A novel theory of organizational and technological change illustrated by an account of the development and implementation of a computer based simulation technology Every workday we wrestle with cumbersome and unintuitive technologies Our response is usually That s just the way it is Even technology designers and workplace managers believe that certain technological changes are inevitable and that they will bring specific unavoidable organizational changes In this book Paul Leonardi offers a new conceptual framework for understanding why technologies and organizations change as they do and why people think those changes had to occur as they did He argues that technologies and the organizations in which they are developed and used are not separate entities rather they are made up of the same building blocks social agency and material agency Over time social agency and material agency become imbricated gradually interlocked in ways that produce some changes we call technological and others we call organizational Drawing on a detailed field study of engineers at a U S auto company Leonardi shows that as the engineers developed and used a a new computer based simulation technology for automotive design they chose to change how their work was organized which then brought new changes to the technology Each imbrication of the social and the material obscured the actors previous choices making the resulting technological and organizational structures appear as if they were inevitable Leonardi suggests that treating organizing as a process of sociomaterial imbrication allows us to recognize and act on the flexibility of information technologies and to create more effective work organizations

Arms and the State Marshall J. Bastable, 2017-05-15

Arms and the State is a history of Britain s first and foremost modern armaments company the Armstrong Whitworth Company from its origins in 1854 to 1914 It focuses on the role of Sir William G Armstrong an engineer and entrepreneur who transformed his modest mechanical engineering business into a vast industrial enterprise which invented developed manufactured and sold heavy guns and warships throughout the world *Arms and the State* reconstructs the global arms trade as it follows Armstrong s companies selling the latest weapons to both sides in the American Civil War Egypt Turkey and Italy

in the 1860s to China Chile and Japan in the 1870s and 1880s and became Britain's leading armaments company in the age of the naval arms races that preceded the First World War In so doing it discusses varied topics such as the social and political nature of technological innovation the quality of Britain's late Victorian entrepreneurs and the impact of armaments on British politics defence policies the international arms trade and imperialism Arms and the State situates the history of the company in its technological political and international contexts with particular attention given to the role of British Parliamentary politics and the inner workings of the War Office and Admiralty bureaucracies The central narrative is Armstrong's role in the militarization of technology in the 1850s the commercialization of the armaments trade on a global scale in the 1860s and 1870s and the emergence of the British military industrial state in the 1880s and 1890s Arms and the State provides a history of the people the technology and the business of the Arms trade It is a fascinating story of the domestic politics the foreign policy and strategic calculations the manipulation of the press and the bureaucratic intrigues that lay behind the invention production and proliferation of the first weapons of mass destruction

Progress Leo Marx, Bruce Mazlish, 1996 Evaluates the foundational idea of progress from many perspectives

Engineers for Change Matthew H. Wisnioski, 2012-10-19 An account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change The engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology In Engineers for Change Matthew Wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and American life The postwar period in America saw a near utopian belief in technology's beneficence Beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford began to view technology in a more negative light Engineers themselves were seen as conformist organization men propping up the military industrial complex A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology's critics These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites And yet as Wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill equipped to handle The negative consequences of technology spring from its very nature and not from engineering's failures Sociotechnologists were recruited to help society adjust to its technology Wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history

Design Technics Zeynep Çelik Alexander, John May, 2020-01-21 Leading scholars historicize and theorize technology s role in architectural design Although the question of technics pervades the contemporary discipline of architecture there are few critical analyses on the topic Design Technics fills this gap arguing that the technical dimension of design has often been flattened into the broader celebratory rhetoric of innovation Bringing together leading scholars in architectural and design history the volume s contributors situate these tools on a broader epistemological and chronological canvas The essays here construct histories some panoramic and others unfolding around a specific episode of seven techniques regularly used by the designer in the architectural studio today rendering modeling scanning equipping specifying positioning and repeating Starting with observations about the epistemological changes that have unfolded in the discipline in recent decades but seeking to offer a more expansive meaning for technics the volume casts new light on concepts such as form experience and image that have played central roles in historical architectural discourses Among the questions addressed How was the concept of form immanent in practices of scanning since the late nineteenth century What was the historical relationship between rendering and experience in Enlightenment discourses How did practices of specifying reconfigure the distinction between intellectual and manual labor What kind of rationality is

inherent in the designer's constant clicking of the mouse in front of her screen. In addressing these and other questions, this engaging and timely collection thereby proposes technics as a site for historical and philosophical reflection not only for those engaged in architectural design but also for any scholar working in the humanities today. Contributors: Lucia Allais, Edward Eigen, Orit Halpern, John Harwood, Matthew C. Hunter, and Michael Osman.
