Computing Science and Statistics Connie Page, Raoul LePage, 2012-12-06 Interface 90 is the continuation of an extremely successful symposium series. The series has provided a forum for the interaction of professionals in statistics, computing science, and in numerical methods wherein they may discuss a wide range of topics at the interface of these disciplines. This is the 22nd Symposium on the Interface Computing Science and Statistics, was held 16-19 May 1990 at the Kellogg Center on the campus of Michigan State University and is the third Symposium to be held under the recently organized Interface Foundation of North America. The Interface Board of Directors consists of the nine most recent Symposium Chairs: James E. Gentle, Lynne Billard, David M. Allen, Thomas J. Boardman, Richard M. Heiberger, Edward J. Wegman, Linda Malone, Raoul LePage, and Jon Kettenring. The officers of the Interface are William Eddy, Board Chairman and Executive Director, Edward Wegman, President, and Treasurer, Lynne Billard, Secretary. My valued colleague, Connie Page, Editor of this Proceedings Volume, and generally a bright and hardworking person, has organizational skills of a higher order which were successfully brought into play during many critical junctures not strictly connected with the Proceedings. Edward Wegman, Barbara Barringer, Bill Eddy, and George Styan all pitched in with useful information on numerous occasions. Our Keynote Speaker, Peter G. Hall, and Plenary Speakers, David L. Donoho, Jerome H. Friedman, who also gave a short course, Bruce Hajek, John Skilling, and C. F. *Range Condition Report Prepared for the Senate Committee on Appropriations*, United States. Lessard, 2013-11-11 This book presents a current review of photonic

technologies and their applications The papers published in this book are extended versions of the papers presented at the International Conference on Applications of Photonic Technology ICAPT 96 held in Montreal Canada on July 29 to August 1 1996 The theme of this event was Closing the Gap Between Theory Developments and Applications The term photonics covers both optics and optical engineering areas of growing scientific and commercial importance throughout the world It is estimated that photonic technology related applications to increase exponentially over the next few years and will play a significant role in the global economy by reaching a quarter of a trillion of US dollars by the year 2000 The global interest and advancements of this technology are represented in this book where leading scientists of twenty two countries with advanced technology in photonics present their latest results The papers selected herein are grouped to address six distinct areas of photonic technology The reader will find throughout the book a combination of invited and contributed papers which reflect the state of the art today and provide some insight about the future of this technology The first two papers are invited They discuss business aspects of photonic engineering One examines if chip to chip interconnections by means of optical technology are a good economic choice while the other discusses the photonic technology from entrepreneurial viewpoint Papers related to materials and considered for photonic applications e g **Dynamic Translinear and Log-Domain Circuits** Jan Mulder, Wouter A. Serdijn, Albert C. van der Woerd, Arthur H.M. van Roermund, 2012-12-06 Log domain and translinear filters provide a competitive alternative to the challenges of ever increasing low voltage low power and high frequency demands in the area of continuous time filters Since translinear filters are fundamentally large signal linear they are capable of realizing a large dynamic range in combination with excellent tunability characteristics Large signal linearity is achieved by exploiting the accurate exponential behavior of the bipolar transistor or the subthreshold MOS transistor A generalization of the dynamic translinear principle exploiting the square law behavior of the MOS transistor is theoretically possible but not practically relevant Translinear and log domain filters are based on the dynamic translinear principle a generalization of the conventional static translinear principle Besides their application for linear filters dynamic translinear circuits can also be used for the realization of non linear dynamic functions such as oscillators RMS DC converters and phase locked loops **Dynamic Translinear and Log Domain Circuits Analysis and Synthesis** covers both the analysis and synthesis of translinear circuits The theory is presented using one unifying framework for both static and dynamic translinear networks which is based on a current mode approach General analysis methods are presented including the large signal and non stationary analysis of noise A well structured synthesis method is described greatly enhancing the designability of log domain and translinear circuits Comparisons are made with respect to alternative analysis and synthesis methods presented in the literature The theory is illustrated and verified by various examples and realizations **Dynamic Translinear and Log Domain Circuits Analysis and Synthesis** is an excellent reference for researchers and circuit designers and may be used as a text for advanced courses on the topic *Three Domain Modelling and Uncertainty Analysis* Atom Mirakyan, Roland De
