Cognitive Psychology Information Processing Introduction Ebook:

Cognitive Psychology and Information Processing R. Lachman, J. L. Lachman, E. C. Butterfield, 2015-12-22 First published in 1979 Basic research at its essence is exploration of the unknown When it is successful isolated pieces of reality are deciphered and described Most of the history of an empirical discipline consists of probes into this darkness some bold others careful and systematic Most of these efforts are initially incorrect At best they are distant approximations to a reality that may not be correctly specified for centuries How then can we describe the fragmented knowledge that characterizes a scientific discipline for most of its history A dynamic field of science is held together by its paradigm The author s think it is essential to adequate scientific education to teach paradigms and believe that there is an effective method The method emphasizes the integral nature rather than the objective correctness of a given set of consensual commitments They believe that paradigmatic content can be effectively combined with the technical research literature commonly presented in scientific texts This book represents the culmination of those beliefs
