InfoSphere Warehouse: Cubing Services and Client Access Interfaces Chuck Ballard, Deepak Rangarao, Jimmy Tang, Philip Wittann, Zach Zakharian, Andy Perkins, Robert Frankus, IBM Redbooks, 2008-12-16. Formerly known as DB2 Warehouse, InfoSphere™ Warehouse enables a unified, powerful data warehousing environment. It provides access to structured and unstructured data as well as operational and transactional data. In this IBM Redbooks publication, we provide a brief overview of InfoSphere Warehouse, but the primary objective is to discuss and describe the capabilities of one particular component of the InfoSphere Warehouse, which is InfoSphere Warehouse Cubing Services. InfoSphere Warehouse Cubing Services is designed to provide a multidimensional view of data stored in relational databases for significantly improved query and analysis capabilities. For this, there are particular schema designs that are typically used for these data warehouse and data mart databases called dimensional or cube models. Optimization techniques are used to dramatically improve the performance of the OLAP queries, which are a core component of data warehousing and analytics. InfoSphere Warehouse Cubing Services works with business intelligence (BI) tools and clients such as Cognos, Alphablox, and Microsoft Excel through client interfaces to accelerate OLAP queries from many data sources. We describe these interfaces and provide examples of how to use them to improve the performance of your OLAP queries. *IBM Cognos Business Intelligence 10.1 Dashboarding Cookbook* Ankit Garg, 2012-07-20.
