4. The roof air conditioning unit must be mounted as near level from front to rear and side to side as is possible when the vehicle is parked on a level plane. If the vehicle roof is sloped in any direction, an exterior leveling shim will need to be added to make the air conditioning unit level. Figure 10 is a type of shim that can be used. Once the exterior surface has been leveled some additional shimming may have to be done to the interior ceiling so that the ceiling and the roof air conditioning unit will mate properly.

5. Remove the carton and packaging from the roof air conditioning unit.

6. Lift the air conditioning unit off it's wooden skid and set directly on the prepared 14" x 14" roof opening with the pointed end of the shroud facing the front of the vehicle and the condensing coil facing the rear. The air conditioning unit may be lifted by it's plastic shroud. See Figure 11.
7. A centering flange, on the underside of the air conditioning unit, must be centered over the 14" x 14" roof opening. See Figure 12 & 13.

#### IMPORTANT NOTICE

If the roof of the RV is smooth and flat the roof seal gasket will provide a sufficient seal between the air conditioner and the roof when secured properly. However, on roofs that are irregular, ribbed, curved and/or rough, a sealant may need to be added around the roof opening to prevent water from entering the interior of the RV. See Figure 13.

#### NOTE

*An additional gasket package, Coleman P/N 6707-6481, is available for Air Conditioner installations on **RIBBED** roofs, such as those commonly found on **Van**s.*
