Gödel's Incompleteness Theorems Juliette Kennedy, 2022-04-14 This Element takes a deep dive into Gödel's 1931 paper giving the first presentation of the Incompleteness Theorems opening up completely new passages in it that might possibly puzzle the student such as the mysterious footnote 48a. It considers the main ingredients of Gödel's proof: arithmetization, strong representability and the Fixed Point Theorem in a layered fashion returning to their various aspects: semantic, syntactic, computational, philosophical and mathematical as the topic arises. It samples some of the most important proofs of the Incompleteness Theorems, e.g. due to Kuratowski, Smullyan and Robinson as well as newer proofs also of other independent statements due to H. Friedman, Weiermann and Paris/Harrington. It examines the question whether the incompleteness of e.g. Peano Arithmetic gives immediately the undecidability of the Entscheidungsproblem as Kripke has recently argued. It considers set-theoretical incompleteness and finally considers some of the philosophical consequences considered in the literature.

European Philosophy of Science - Philosophy of Science in Europe and the Viennese Heritage Maria Carla Galavotti, Elisabeth Nemeth, Friedrich Stadler, 2013-08-28 This volume combines the theoretical and historical perspective focusing on the specific features of a European philosophy of science. On the occasion of the 20th anniversary of the Institute Vienna Circle the Viennese roots and influences will be addressed in addition. There is no doubt that contemporary philosophy of science originated mainly in Europe beginning in the 19th century and has influenced decisively the subsequent development of globalized philosophy of science, esp. in North America. Recent research in this field documents some specific characteristics of philosophy of science covering the natural, social and also cultural sciences in the European context up to the destruction and forced migration caused by Fascism and National Socialism. This European perspective with the integration of history and philosophy of science and the current situation in the philosophy of science after the transatlantic interaction and transformation and the return after World War II raises the question of contemporary European characteristics in the philosophy of science. The role and function of the renowned Vienna Circle of Logical Empiricism and its impact and influence on contemporary philosophy of science is on the agenda too. Accordingly the general topic is dealt with in two parallel sessions representing systematic/formal as well as genetic/historical perspectives on philosophy of science in a European context up to the present.

Feferman on Foundations Gerhard Jäger, Wilfried Sieg, 2018-04-04 This volume honours the life and work of Solomon Feferman, one of the most prominent mathematical logicians of the latter half of the 20th century. In the collection of essays presented here, researchers examine Feferman's work on mathematical as well as specific methodological and philosophical issues that tie into mathematics. Feferman's work was largely based in mathematical logic, namely model theory, set theory, proof theory and computability theory, but also branched out into methodological and philosophical issues, making it well known beyond the borders of the mathematics community. With regard to methodological issues, Feferman supported concrete projects. On the one hand, these projects

calibrate the proof theoretic strength of subsystems of analysis and set theory and provide ways of overcoming the limitations imposed by Gödel's incompleteness theorems through appropriate conceptual expansions On the other they seek to identify novel axiomatic foundations for mathematical practice truth theories and category theory In his philosophical research Feferman explored questions such as What is logic and proposed particular positions regarding the foundations of mathematics including for example his conceptual structuralism The contributing authors of the volume examine all of the above issues Their papers are accompanied by an autobiography presented by Feferman that reflects on the evolution and intellectual contexts of his work The contributing authors critically examine Feferman's work and in part actively expand on his concrete mathematical projects The volume illuminates Feferman's distinctive work and in the process provides an enlightening perspective on the foundations of mathematics and logic

Kurt Gödel Solomon Feferman, Charles Parsons, Stephen G. Simpson, 2010-04-19 Kurt Gödel 1906-1978 did groundbreaking work that transformed logic and other important aspects of our understanding of mathematics especially his proof of the incompleteness of formalized arithmetic This book on different aspects of his work and on subjects in which his ideas have contemporary resonance includes papers from a May 2006 symposium celebrating Gödel's centennial as well as papers from a 2004 symposium Proof theory set theory philosophy of mathematics and the editing of Gödel's writings are among the topics covered Several chapters discuss his intellectual development and his relation to predecessors and contemporaries such as Hilbert Carnap and Herbrand Others consider his views on justification in set theory in light of more recent work and contemporary echoes of his incompleteness theorems and the concept of constructible sets

Alfred Tarski Anita Burdman Feferman, Solomon Feferman, 2004-10-04 Publisher Description

Logic, Logic, and Logic George Boolos, 1998 George Boolos was one of the most prominent and influential logicians philosophers of recent times This collection nearly all chosen by Boolos himself shortly before his death includes thirty papers on set theory second order logic and plural quantifiers on Frege Dedekind Cantor and Russell and on miscellaneous topics in logic and proof theory including three papers on various aspects of the Gödel theorems Boolos is universally recognized as the leader in the renewed interest in studies of Frege's work on logic and the philosophy of mathematics John Burgess has provided introductions to each of the three parts of the volume and also an afterword on Boolos's technical work in provability logic which is beyond the scope of this volume

Emergence in Science and Philosophy Antonella Corradini, Timothy O'Connor, 2010-06-18 The concept of emergence has seen a significant resurgence in philosophy and the sciences yet debates regarding emergentist and reductionist visions of the natural world continue to be hampered by imprecision or ambiguity Emergent phenomena are said to arise out of and be sustained by more basic phenomena while at the same time exerting a top down control upon those very sustaining processes To some critics this has the air of magic as it seems to suggest a kind of circular causality Other critics deem the concept of emergence to be objectionably anti naturalistic Objections such as these have led many thinkers to construe emergent phenomena instead as

coarse grained patterns in the world that while calling for distinctive concepts do not disrupt the ordinary dynamics of the finer grained more fundamental levels Yet reconciling emergence with a presumed pervasive causal continuity at the fundamental level can seem to deflate emergence of its initially profound significance This basic problematic is mirrored by similar controversy over how best to characterize the opposite systematizing impulse most commonly given an equally evocative but vague term reductionism The original essays in this volume help to clarify the alternatives inadequacies in some older formulations and arguments are exposed and new lines of argument on behalf the two visions are advanced

Truth, Objects, Infinity Fabrice Pataut, 2017-01-27 This volume features essays about and by Paul Benacerraf whose ideas have circulated in the philosophical community since the early nineteen sixties shaping key areas in the philosophy of mathematics the philosophy of language the philosophy of logic and epistemology The book started as a workshop held in Paris at the Collège de France in May 2012 with the participation of Paul Benacerraf The introduction addresses the methodological point of the legitimate use of so called Princess Margaret Premises in drawing philosophical conclusions from Gödel's first incompleteness theorem The book is then divided into three sections The first is devoted to an assessment of the improved version of the original dilemma of Mathematical Truth due to Hartry Field the challenge to the platonist is now to explain the reliability of our mathematical beliefs given the very subject matter of mathematics either pure or applied The second addresses the issue of the ontological status of numbers Frege's logicism fictionalism structuralism and Bourbaki's theory of structures are called up for an appraisal of Benacerraf's negative conclusions of What Numbers Could Not Be The third is devoted to supertasks and bears witness to the unique standing of Benacerraf's first publication Tasks Super Tasks and Modern Eleatics in debates on Zeno's paradox and associated paradoxes infinitary mathematics and constructivism and finitism in the philosophy of mathematics Two yet unpublished essays by Benacerraf have been included in the volume an early version of Mathematical Truth from 1968 and an essay on What Numbers Could Not Be from the mid 1970's A complete chronological bibliography of Benacerraf's work to 2016 is provided Essays by Jody Azzouni Paul Benacerraf Justin Clarke Doane Sébastien Gandon Brice Halimi Jon Pérez Laraudogoitia Mary Leng Antonio León Sánchez and Ana Carolina Mejía Marco Panza Fabrice Pataut Philippe de Rouilhan Andrea Sereni and Stewart Shapiro **In the Light of Logic** Solomon

Feferman, 1998 In this collection of essays written over a period of twenty years Solomon Feferman explains advanced results in modern logic and employs them to cast light on significant problems in the foundations of mathematics Most troubling among these is the revolutionary way in which Georg Cantor elaborated the nature of the infinite and in doing so helped transform the face of twentieth century mathematics Feferman details the development of Cantorian concepts and the foundational difficulties they engendered He argues that the freedom provided by Cantorian set theory was purchased at a heavy philosophical price namely adherence to a form of mathematical platonism that is difficult to support Beginning with a previously unpublished lecture for a general audience Deciding the Undecidable Feferman examines the famous list of

twenty three mathematical problems posed by David Hilbert concentrating on three problems that have most to do with logic Other chapters are devoted to the work and thought of Kurt G del whose stunning results in the 1930s on the incompleteness of formal systems and the consistency of Cantors continuum hypothesis have been of utmost importance to all subsequent work in logic Though G del has been identified as the leading defender of set theoretical platonism surprisingly even he at one point regarded it as unacceptable In his concluding chapters Feferman uses tools from the special part of logic called proof theory to explain how the vast part if not all of scientifically applicable mathematics can be justified on the basis of purely arithmetical principles At least to that extent the question raised in two of the essays of the volume Is Cantor Necessary is answered with a resounding no This volume of important and influential work by one of the leading figures in logic and the foundations of mathematics is essential reading for anyone interested in these subjects **Logic from Russell to Church**

Dov M. Gabbay, John Woods, 2009-06-16 This volume is number five in the 11 volume Handbook of the History of Logic It covers the first 50 years of the development of mathematical logic in the 20th century and concentrates on the achievements of the great names of the period Russell Post G del Tarski Church and the like This was the period in which mathematical logic gave mature expression to its four main parts set theory model theory proof theory and recursion theory Collectively this work ranks as one of the greatest achievements of our intellectual history Written by leading researchers in the field both this volume and the Handbook as a whole are definitive reference tools for senior undergraduates graduate students and researchers in the history of logic the history of philosophy and any discipline such as mathematics computer science and artificial intelligence for whom the historical background of his or her work is a salient consideration The entire range of modal logic is covered Serves as a singular contribution to the intellectual history of the 20th century Contains the latest scholarly discoveries and interpretative insights Nonlinearity, Chaos, and Complexity

Gödel's Theorems and Zermelo's Axioms Lorenz Halbeisen, Regula Krapf, 2020-10-16 This book provides a concise and self contained introduction to the foundations of mathematics The first part covers the fundamental notions of mathematical

logic including logical axioms formal proofs and the basics of model theory Building on this in the second and third part of the book the authors present detailed proofs of Gödel's classical completeness and incompleteness theorems In particular the book includes a full proof of Gödel's second incompleteness theorem which states that it is impossible to prove the consistency of arithmetic within its axioms The final part is dedicated to an introduction into modern axiomatic set theory based on the Zermelo's axioms containing a presentation of Gödel's constructible universe of sets A recurring theme in the whole book consists of standard and non standard models of several theories such as Peano arithmetic Presburger arithmetic and the real numbers The book addresses undergraduate mathematics students and is suitable for a one or two semester introductory course into logic and set theory Each chapter concludes with a list of exercises

Turing Computability Robert I. Soare, 2016-06-20 Turing's famous 1936 paper introduced a formal definition of a computing machine a Turing machine This model led to both the development of actual computers and to computability theory the study of what machines can and cannot compute This book presents classical computability theory from Turing and Post to current results and methods and their use in studying the information content of algebraic structures models and their relation to Peano arithmetic The author presents the subject as an art to be practiced and an art in the aesthetic sense of inherent beauty which all mathematicians recognize in their subject Part I gives a thorough development of the foundations of computability from the definition of Turing machines up to finite injury priority arguments Key topics include relative computability and computably enumerable sets those which can be effectively listed but not necessarily effectively decided such as the theorems of Peano arithmetic Part II includes the study of computably open and closed sets of reals and basis and nonbasis theorems for effectively closed sets Part III covers minimal Turing degrees Part IV is an introduction to games and their use in proving theorems Finally Part V offers a short history of computability theory The author has honed the content over decades according to feedback from students lecturers and researchers around the world Most chapters include exercises and the material is carefully structured according to importance and difficulty The book is suitable for advanced undergraduate and graduate students in computer science and mathematics and researchers engaged with computability and mathematical logic

Logic and Scientific Methods Maria Luisa Dalla Chiara, Kees Doets, Daniele Mundici, Johan van Benthem, 2013-06-29 This is the first of two volumes comprising the papers submitted for publication by the invited participants to the Tenth International Congress of Logic Methodology and Philosophy of Science held in Florence August 1995 The Congress was held under the auspices of the International Union of History and Philosophy of Science Division of Logic Methodology and Philosophy of Science The invited lectures published in the two volumes demonstrate much of what goes on in the fields of the Congress and give the state of the art of current research The two volumes cover the traditional subdisciplines of mathematical logic and philosophical logic as well as their interfaces with computer science

linguistics and philosophy Philosophy of science is broadly represented too including general issues of natural sciences social sciences and humanities The papers in Volume One are concerned with logic mathematical logic the philosophy of logic and mathematics and computer science The Palgrave Centenary Companion to Principia Mathematica Bernard Linsky, 2013-11-29 To mark the centenary of the 1910 to 1913 publication of the monumental Principia Mathematica by Alfred N Whitehead and Bertrand Russell this collection of fifteen new essays by distinguished scholars considers the influence and history of PM over the last hundred years **Constructivity and Computability in Historical and Philosophical Perspective** Jacques Dubucs, Michel Bourdeau, 2014-08-27 Ranging from Alan Turing's seminal 1936 paper to the latest work on Kolmogorov complexity and linear logic this comprehensive new work clarifies the relationship between computability on the one hand and constructivity on the other The authors argue that even though constructivists have largely shed Brouwer's solipsistic attitude to logic there remain points of disagreement to this day Focusing on the growing pains computability experienced as it was forced to address the demands of rapidly expanding applications the content maps the developments following Turing's ground breaking linkage of computation and the machine the resulting birth of complexity theory the innovations of Kolmogorov complexity and resolving the dissonances between proof theoretical semantics and canonical proof feasibility Finally it explores one of the most fundamental questions concerning the interface between constructivity and computability whether the theory of recursive functions is needed for a rigorous development of constructive mathematics This volume contributes to the unity of science by overcoming disunities rather than offering an overarching framework It posits that computability's adoption of a classical ontological point of view kept these imperatives separated In studying the relationship between the two it is a vital step forward in overcoming the disagreements and misunderstandings which stand in the way of a unifying view of logic *Shadows of the Mind* Roger Penrose, 1994 Presents the author's thesis that consciousness in its manifestation in the human quality of understanding is doing something that mere computation cannot and attempts to understand how such non computational action might arise within scientifically comprehensive physical laws From Consistency to Incompleteness Byoung-il Choi, 1997
