**Numerical Solution of Hybrid Nanofluid and Its Stability Over Permeable Wedge Sheet With Heat Transfer Analysis** Aisha M.

Alqahtani,Zeeshan,Waris Khan,Florentin Smarandache,Nidhal Becheikh,Roobaea Alroobaea, Taseer Muhammad,2024-01-01 The inclusion of nanoparticles has the potential to improve the thermal efficiency of the base fluid The field of nanofluid NF dynamics has attracted important attention due to its extensive range of practical uses like fuel cells solar energy medication administration heat transfer microfabrication coolant applications and other related domains The aim of this study is to scrutinize the impact of Lorentz force thermal energy joule heating heat source and injection parameters and Brownian and thermoporetic diffusions on the hybrid nanofluid over the moving wedge The stability inquiry is reported for the existing work in order to confirm the stable solutions that make the study unique Novelty of the existing work is to investigate the hybrid nanofluid flow and its stability The nanoparticles MoS<sub>2</sub> and Ag are suspended in ethylene glycol and water used as host fluids The numerical solution is obtained from the dimensionless first order differential equations which are achieved from the basic flow phenomena through similarity alteration variables The influence of emerging factors on flow phenomena is reported via graphs The positive eigenvalues report stable solutions while the negative eigenvalues designate unstable solutions It is perceived that due to Lorentz force the rate of the fluid declines while the temperature inside the flow channel enhances The velocity profile decreases while the temperature and concentration increase with increasing quantities of permeable factors Similarly the Forchheimer number causes to enhance the flow rate and decrease the heat and concentration outlines The current analysis is validated by the published work

*Electrochemically Assisted Remediation of Contaminated Soils* M. A. Rodrigo,E. V. Dos Santos,2021-06-15 This book provides an overview of the current development status of remediation technologies involving electrochemical processes which are used to clean up soils that are contaminated with different types of contaminants organics inorganics metalloids and radioactive Written by internationally recognized experts it comprises 21 chapters describing the characteristics and theoretical foundations of various electrochemical applications of soil remediation The book s opening section discusses the fundamental properties and characteristics of the soil which are essential to understand the processes that can most effectively remove organic and inorganic compounds This part also focuses on the primary processes that contribute to the application of electrochemically assisted remediation hydrodynamic aspects and kinetics of contaminants in the soil It also reviews the techniques that have been developed for the treatment of contaminated soils using electrochemistry and discusses different strategies used to enhance performance the type of electrode and electrolyte and the most important operating conditions In turn the book s

second part deals with practical applications of technologies related to the separation of pollutants from soil. Special emphasis is given to the characteristics of these technologies regarding transport of the contaminants and soil toxicity after treatment. The third part is dedicated to new technologies including electrokinetic remediation and hybrid approaches for the treatment of emerging contaminants by ex situ and in situ production of strong oxidant species used for soil remediation. It also discusses pre pilot scale for soil treatment and the use of solar photovoltaic panels as an energy source for powering electrochemical systems which can reduce both the investment and maintenance costs of electrochemically assisted processes.

Strategies to Enhance Air Force Communication with Internal and External Audiences National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Air Force Studies Board, Committee on Strategies to Enhance Air Force Communication with Internal and External Audiences: A Workshop, 2016-01-27. The U S Air Force USAF helps defend the United States and its interests by organizing training and equipping forces for operations in and through three distinct domains: air space and cyberspace. The Air Force concisely expresses its vision as Global Vigilance Global Reach and Global Power for America. Operations within each of these domains are dynamic, take place over large distances, occur over different operational timelines and cannot be routinely seen or recorded, making it difficult for Airmen, national decision makers and the American People to visualize and comprehend the full scope of Air Force operations. As a result, the Air Force faces increasing difficulty in succinctly and effectively communicating the complexity, dynamic range and strategic importance of its mission to Airmen and to the American people. To address this concern, the Chief of Staff of the USAF requested that the National Academies of Sciences Engineering and Medicine convene a workshop to explore options on how the Air Force can effectively communicate the strategic importance of the Service, its mission and the role it plays in the defense of the United States. Participants worked to address the issues that a diverse workforce encompassing a myriad of backgrounds, education and increasingly diverse current mission sets drives the requirement for a new communication strategy. The demographics of

today's Air Force creates both a unique opportunity and a distinct challenge to Air Force leadership as it struggles to communicate its vision and strategy effectively across several micro cultures within the organization and to the general public This report summarizes the presentations and discussions from the workshop
