### Study Guide

#### Investigation 1:

**What is the Sun?** The Sun is an average star, composed mostly of hydrogen (72) and helium (26%), around which the other solar system bodies revolve. It is the star closest to the Earth.

**What is the solar system?** The solar system is the Sun and all the bodies that orbit it, including planets and their moons, asteroids, and comets.

**What is gravity?** Gravity is the force of attraction between two objects; larger bodies, like the Sun, have a greater force of gravity.

**Why do planets travel around the Sun in circular paths?** Gravity pulls on planets with a force that changes their direction of travel from a straight line into a circle.

**Compare and contrast asteroids and comets.** Both orbit the sun and are smaller than planets. Comets are rock mixed with ice while asteroids are just rock. Comets are farther from the Sun.

#### Investigation 2:

**What is a variable?** A variable is anything that you can change in an experiment that might affect the outcome.

**What variable might affect the number of cycles the pendulum makes in 15 seconds?** Mass, length, and starting position

**Where have you seen a pendulum?** In an old clock, at a museum, as a playground swing, in a metronome

**What variables made no difference in the number of swings?** Mass and release position

**Which variable did make a difference in the number of swings?** Length

**What is the relationship between the length of the pendulum and the number of swings it makes in a unit of time?** As the length of the pendulum increases, the number of swings decreases

**What is a two-coordinate graph?** A display of experimental data that shows a relationship between an independent variable and a dependent variable

**What is a prediction?** A reasoned estimation of a future event based on context, data, or experience
