Cardiovascular Health in Children and Adolescents: Present and future Shikai Yu, Shaun Chen, Zhen-Yu Zhang, 2025-01-13 Cardiovascular disease is the most common chronic non-infectious disease and ranked as the number one cause of death in the world Although usually manifested at older ages, cardiovascular disease may originate from younger ages Massive studies have shown that cardiovascular risk factors tracked from childhood, adolescence to adulthood Keeping an ideal cardiovascular health in childhood and adolescence is thus highly important for preventing the development of cardiovascular disease As cardiovascular disease is often perceived as a problem for the older population, cardiovascular health in children and adolescents is usually neglected, resulting in a long-lasting exposure to unhealthy behaviors and factors of cardiovascular risk as well as lower detection and poor management of cardiovascular disease in children and adolescents The incidence and prevalence of cardiovascular disease and its risk factors in young people have been increasing over the past few decades as reported by many studies Recent data based on the National Health and Nutrition Examination Surveys 2005-2010 emphasized the worrying situation of the cardiovascular health in US adolescents More data are needed to reveal the current situation of cardiovascular health and the related organ damage in children and adolescents especially in low and middle income countries Also, investigations are warranted to predict future trends and to develop potential intervention strategies aiming at the improvement of cardiovascular health in children and adolescents
