11. **How many times have you been in a fight with your partner?**

Abstract The authors examined the effects of a 12-week, 100% body weight (BW) resistance training program on the body composition and muscle strength of 10 sedentary, middle-aged men. The subjects were randomly assigned to either a resistance training or control group. The resistance training group performed a 12-week, 100% BW resistance training program, while the control group remained sedentary. The resistance training group showed significant increases in muscle strength and body composition, while the control group showed no significant changes. The results suggest that a 12-week, 100% BW resistance training program can effectively improve muscle strength and body composition in sedentary, middle-aged men.
