Cyber Marx Cycles And Circuits Of Struggle In High Technology Capitalism:

Cyber-Marx Nick Dyer-Witheford, 1999 In this highly readable and thought provoking work Nick Dyer Witheford assesses the relevance of Marxism in our time and demonstrates how the information age far from transcending the historic conflict between capital and its laboring subjects constitutes the latest battleground in their encounter **Cybernetic Capitalism**

Jan Overwijk, 2025-01-07 This book offers a conceptual interrogation of how capital navigates its cybernetic environment Taking an immanent perspective the book develops a unique synthesis between Niklas Luhmann's systems theory and the critical theory tradition Overwijk shows how neoliberal capitalism's version of rationalization depends on the organization and management of society on the basis of cybernetic principles Overwijk seeks to update earlier critiques of cybernetic capitalism that stressed the system's colonization of its environment its making the entirety of social life communicable Under today's cybernetic rationalization things are radically different Neoliberal political economy aims to incite the incalculability of the market platform capitalists venture to capitalize on the unpredictable efforts of their users and post Fordist management seeks to encourage the creativity of service workers As this book uniquely shows capital no longer aims at total communicability but instead seeks to provoke and exploit the incommunicability of its environment In this sense it offers an ecological theory of capitalism laying conceptual the groundwork for understanding the extractivist logic of the Anthropocene Cybernetic Capitalism shows how the cultural obsession with incommunicability that animates cybernetic rationalization has taken an irrationalist turn resurfacing in the mysticism of conspiracy theory and radical right politics The book offers a novel and compelling materialist interpretation of today's paradoxical connections between neoliberal rationalism and radical right irrationalism **Capitalists and Conquerors**

The Eye of the Master Matteo Pasquinelli, 2023-10-10 A social history of AI that finally reveals its roots in the spatial computation of industrial factories and the surveillance of collective behaviour What is AI A dominant view describes it as the quest to solve intelligence a solution supposedly to be found in the secret logic of the mind or in the deep physiology of the brain such as in its complex neural networks The Eye of the Master argues to the contrary that the inner code of AI is shaped not by the imitation of biological intelligence but the intelligence of labour and social relations as it is found in Babbage s calculating engines of the industrial age as well as in the recent algorithms for image recognition and surveillance The idea that AI may one day become autonomous or sentient as someone thought of Google s LaMDA is pure fantasy Computer algorithms have always imitated the form of social relations and the organisation of labour in their own inner structure and their purpose remains blind automation The Eye of the Master urges a new literacy on AI for scientists journalists and new generations of activists who should recognise that the mystery of AI is just the automation of labour at the highest degree not intelligence per se

Mark Fackler,2014-03-10 The Handbook of Media and Mass Communication Theory presents a comprehensive collection of original essays that focus on all aspects of current and classic theories and practices relating to media and mass communication Focuses on all aspects of current and classic theories and practices relating to media and mass communication Includes essays from a variety of global contexts from Asia and the Middle East to the Americas Gives niche theories new life in several essays that use them to illuminate their application in

specific contexts Features coverage of a wide variety of theoretical perspectives Pays close attention to the use of theory in understanding new communication contexts such as social media 2 Volumes *Internet and Society* Christian Fuchs, 2007-12-12 By outlining a social theory of the internet and the information society this book demonstrates how the ecological economic political and cultural systems of contemporary society have been transformed by new information and communication technologies *Value in Marx* George Henderson, 2013-03-20 Long prone to dogmatic disagreement the question of value in Marx's thought what value is the purpose it serves its application to real world capitalism requires renewal if Marx's work is to remain vibrant In *Value in Marx* George Henderson offers a lucid rereading of Marx that strips value of its turgid theoretical reduction and reframes it as an investigation into the tensions between social relations and forms as they are rather than as what they could otherwise become Drawing on Marx's *Capital* and *Grundrisse* Henderson shows how these volumes do not harbor a single theory of value that equates value to capital Instead these books experimentally compose and recompose value for a world that is more than capitalist At stake is how Marx conceives of human freedom of balanced social arrangements and of control over the things people produce Henderson finds that the limits on social becoming including the tendency toward alienated existence haunt Marx even as he looks beyond the critique of capital to an emancipated society to come Can these limits be confronted in a creative even joyful way Can they become aspects of what we desire rather than being silenced and denied As long as we persist in interpreting value broadly following it as an active and not a shut down predetermined feature of Marx's texts Henderson ultimately views Marx as responding positively to these challenges and employing value as a powerful tool of the political imaginary **Empire and Education** Alexander J. The Constitution of the City Allen J. Scott,2017-08-01 This book presents an exploratory account of the origins and dynamics of cities The author recounts how the essential foundations of the urbanization process reside in two interrelated forces These are the tendency for many different kinds of human activity to gather together to form functional complexes on the landscape and the multifaceted intra urban space sorting crosscurrents set in motion by this primary urge

From these basic points of departure the city in all its fullness emerges as a reflexive moment in social and economic development The argument of the book is pursued both in theoretical and in empirical terms devoting attention to the changing character of urbanization in the capitalist era A point of particular emphasis concerns the peculiar patterns of resurgent urbanization that are making their historical and geographical appearance in the currently emerging phase of cognitive cultural capitalism and that are now rapidly diffusing across the globe
