Forensic Media Reconstructing Accidents In Accelerated Modernity Sign Storage Transmission:

Forensic Media Greg Siegel, 2014-11-05 In *Forensic Media* Greg Siegel considers how photographic electronic and digital media have been used to record and reconstruct accidents particularly high speed crashes and catastrophes Focusing in turn on the birth of the field of forensic engineering Charles Babbage's invention of a self registering apparatus for railroad trains flight data and cockpit voice recorders black boxes the science of automobile crash testing and various accident reconstruction techniques and technologies Siegel shows how forensic media work to transmute disruptive chance occurrences into reassuring narratives of causal succession Through historical and philosophical analyses he demonstrates that forensic media are as much technologies of cultural imagination as they are instruments of scientific inscription as imbued with ideological fantasies as they are compelled by institutional rationales By rethinking the historical links and cultural relays between accidents and forensics Siegel sheds new light on the corresponding connections between media technology and modernity

Mathematical Methods for Accident Reconstruction Harold Franck, Darren Franck, 2025-09-17 This book demonstrates the application of mathematics to modeling accident reconstructions involving a range of moving vehicles including automobiles small and large trucks bicycles motorcycles all terrain vehicles and construction equipment such as hoists and cranes The book is anchored on the basic principles of physics that may be applied to any of the above named vehicles or equipment Topics covered include the foundations of measurement the various energy methods used in reconstruction momentum methods vehicle specifications failure analysis geometrical characteristics of highways and softer scientific issues such as visibility perception and reaction The authors examine the fundamental characteristics of different vehicles discuss the retrieval of data from crash data recorders and review low speed impacts with an analysis of staged collisions Finally it details established standards and protocols for accident reconstruction for use in both investigations and in the courtroom In addition this new edition covers nonvehicle related topics like slip and fall analysis fall protection and engine and mechanical failure as well as federal rules and laws that have been established for the work environment Many reconstructions of incidents require extensive analysis that may require a variety of methods in order to properly model the incident Exploring a broad range of accident scenarios the breadth and depth of this book's coverage makes *Mathematical Methods for Accident Reconstruction Second Edition* a critical reference for engineers and scientists who perform vehicular accident reconstructions
