**Syntax and Semantics** Raffaella Zanuttini, Héctor Campos, Elena Herburger, Paul H. Portner, 2006-05-19 Presenting cutting edge research in syntax and semantics this important volume furthers theoretical claims in generative linguistics and represents a significant addition to present scholarship in the field Leading scholars present crosslinguistic studies dealing with clausal architecture negation and tense and aspect and the issue of whether a statistical model can by itself capture the richness of human linguistic abilities Taken together these contributions elegantly show how theoretical tools can propel our understanding of language beyond pretheoretical descriptions especially when combined with the insight and skills of linguists who can analyze difficult and complex data Crosslinguistic Research in Syntax and Semantics covers a range of topics currently at the center of lively debate in the linguistic literature such as the structure of the left periphery of the clause the proper treatment of negative polarity items and the role of statistical learning in building a model of linguistic competence The ten original contributions offer an excellent balance of novel empirical description and theoretical analysis applied to a wide range of languages including Dutch German Irish English Italian Malagasy Malay and a number of medieval Romance languages Scholars and students of semantics syntax and linguistic theory will find it to be a valuable resource for ongoing scholarship and advanced study

**Lexical Semantics, Syntax, and Event Structure** Malka Rappaport Hovav, Edit Doron, Ivy Sichel, 2010-02-25 This book focuses on the linguistic representation of temporality in the verbal domain and its interaction with the syntax and semantics of verbs arguments and modifiers Leading scholars explore the division of labour between syntax compositional semantics and lexical semantics in the encoding of event structure encompassing event participants and the temporal properties associated with events They examine the interface between event structure and the systems with which it interacts including the interface between event structure and the syntactic realization of arguments and modifiers Deploying a variety of frameworks and theoretical perspectives they consider central issues and questions in the field among them whether argument structure is specified in the lexical entries of verbs or syntactically constructed so that syntactic position determines thematic status whether the hierarchical structure evidenced in argument structure find parallels in sign language should the relation between members of an alternation pair such as the causative inchoative alternation be understood lexically or derivationally and the role of syntactic category in determining the configuration of argument structure

**Context, Cognition and Conditionals** Chi-Hé Elder, 2019-06-24 This book proposes a semantic theory of conditionals that can account for i the variability in usages that conditional sentences can be put and ii both conditional sentences of the form if p q and those conditional thoughts that are expressed without using if It presents theoretical arguments as well as empirical evidence from English and other languages in support of the thesis that an adequate study of conditionals has to go beyond an analysis of specific sentence forms or lexical items The resulting perspective on conditionals is one in which conditionality is located at a higher level than that of the sentence namely at the level of thought The author argues that it is only through adopting such a perspective and with it a commitment to context

dependent semantics that we can successfully represent conditional utterances as they are used and understood by ordinary language users It will be of interest to students and scholars working on the semantics of conditionals in the fields of linguistics especially semantics and pragmatics and philosophy of language
