Materials ,1995 **Teaching Science to Every Child** John Settlage,Sherry A. Southerland,2007 *Teaching Science to*

Every Child proposes a fresh perspective for teaching school science and draws upon an extensive body of classroom research to meaningfully address the achievement gap in science education. Settlage and Southerland begin from the point of view that science can be thought of as a culture rather than as a fixed body of knowledge. Throughout this book the idea of culture is used to illustrate how teachers can guide all students to be successful in science while still being respectful of students' ethnic heritages and cultural traditions. By combining a cultural view of science with instructional approaches shown to be effective in a variety of settings, the authors provide elementary and middle school teachers with a conceptual framework as well as pedagogical approaches which support the science learning of a diverse array of students. Assessing Science Learning Janet Coffey, Rowena Douglas, Carole Stearns, 2008. In addressing assessment as a central element of teaching practice, *Assessing Science Learning* explores the various forms assessment can take. The research projects described show the strong link between assessment and improved student learning. The essays invite science teachers to reflect on their practices and priorities and to consider a variety of productive assessment strategies and frameworks.

Mathematics and Science Curriculum Programs, 2002. Challenging Science Standards Charles R. Ault Jr., 2015-08-06. For several decades educators have struggled to identify the attributes all sciences have in common. In the popular mind, this effort constitutes the importance of teaching the scientific method. In the policy maker's world, this pursuit yields standards for all Americans that unify the sciences. For teachers, the quest for unity has typically meant teaching science as process. However, a curriculum that prioritizes what all sciences have in common obscures their vital differences. For example, studying landslides is very different from doing x-ray diffraction; climate science is unlike medical research. Naïve ideas about scientific unity impoverish the public's ability to evaluate scientific enterprises. *Challenging Science Standards* voices skepticism towards the quest for unity. Through analyses of disciplinary knowledge, school curricula, and classroom learning, the book uncovers flaws in the unifying dimensions of the science standards. It proposes respect for disciplinary diversity and attention to questions of value in choosing what science to teach. Illuminated by vignettes of children and adolescents studying topics ranging from snail populations to horse fossils, *Challenging Science Standards* proposes promising remedies.

Science Education and Student Diversity Okhee Lee, Aurolyn Luykx, 2006-06-26. The achievement gaps in science and the underrepresentation of minorities in science-related fields have long been a concern of the nation. This book examines the roots of this problem by providing a comprehensive state-of-the-field analysis and synthesis of current research on science education for minority students. Research from a range of theoretical and methodological perspectives is brought to bear on the question of how and why our nation's schools have failed to provide equitable learning opportunities with all students in science education. From this wealth of investigative data, the authors propose a research agenda for the field of science education, identifying strengths and weaknesses in the literature to date as well as the most urgent priorities for those committed to the goals of equity and excellence in science education. *Teaching Science in Elementary and Middle*
