The Second Physicist Christa Jungnickel, Russell McCormmach, 2017-06-10 This book explores the rise of theoretical physics in 19th century Germany. The authors show how the junior second physicist in German universities over time became the theoretical physicist of equal standing to the experimental physicist Gustav Kirchhoff. Hermann von Helmholtz and Max Planck are among the great German theoretical physicists whose work and career are examined in this book. Physics was then the only natural science in which theoretical work developed into a major teaching and research specialty in its own right. Readers will discover how German physicists arrived at a well defined field of theoretical physics with well understood and generally accepted goals and needs. The authors explain the nature of the work of theoretical physics with many examples, taking care always to locate the research within the workplace. The book is a revised and shortened version of *Intellectual Mastery of Nature: Theoretical Physics from Ohm to Einstein*, a two volume work by the same authors. This new edition represents a reformulation of the larger work. It retains what is most important in the original work while including new material sharpening discussions and making the research more accessible to readers. It presents a thorough examination of a seminal era in physics. *Catalogue of Printed Books* British Museum. Department of Printed Books, 1903

The National Union Catalog, Pre-1956 Imprints, 1976 *Science as Cultural Practice* Moritz Epple, Claus Zittel, 2014-02-14 This volume represents a collection of studies in cultural history and theory of science from the early modern era to the present. The essays are linked by the conviction that one of the most significant developments in recent scientific historiography consists in its insistence that the relations between science, culture and history be understood and examined reciprocally. Not only does scientific practice take place under conditions shaped by social and cultural forces; it also generates and necessitates its own specific patterns of cultural, social and political activity. Sciences which have evolved into significant social systems produce their own cultures and politics. Through discussion of the common origin of scientific knowledge and the cultures and politics of research, this volume hopes to make a contribution toward a better understanding of the roles of scientific research from its inception in the 17th century up to the dramatic upheavals in the 20th century. With articles by Lorraine Daston, Sven Dierig, Moritz Epple, Evelyn Fox Keller, Mary Jo Nye, Dominique Pestre, Hans J. R.
