Optimizing Citrix® XenDesktop® for High Performance Craig Thomas Ellrod,2015-12-28 Successfully deploy XenDesktop sites for a high performance Virtual Desktop Infrastructure VDI About This Book Size the VDI environment so the administrator has breathing room to design and build their XenDesktop systems efficiently Use desktop virtualization tools to provide users fast convenient access

to their Windows Desktops Understand the key pinch points in the resource layers such as the Client layer Network Layer Access Layer Control Layer Services Layer and Resources Layer Who This Book Is For Citrix XenDesktop High Performance is written for administrators who would like to deploy Citrix XenDesktop in their enterprises with the aim of providing high efficiency Basic familiarity with Citrix XenDesktop is assumed What You Will Learn Understand key concepts terminology and system requirements Discover how components work in regards to virtualization and performance Identify architectural resource layers and components Explore the hypervisor virtualization software that runs on top of the hardware and learn how to tune it for maximum performance Analyze client hardware and software including thin clients and mobile devices In Detail Citrix XenDesktop is a suite of desktop virtualization tools designed to provide users with fast and convenient access to their Windows desktops and applications through any device Virtual desktops mean that rather than setting up hundreds or thousands of individual computers in an enterprise companies can instead opt to create servers with large amounts of memory disk and processing resources and use virtualization to offer these resources to end users The result of this is that users are provided with an experience that appears to be identical to having an individual desktop PC Each user has some disk space processor time and memory allocated to them as though it is present on their own physical machine when in reality the resources are physically present on a centralized server This book starts by answering the basic questions you need to ask when considering XenDesktop followed by methods of how you can properly size your server infrastructure for XenDesktop You ll discover how to optimize the virtual machines used in XenDesktop how to optimize your network for XenDesktop and how to optimize the hypervisor and the cloud You ll also learn how to monitor XenDesktop to maximize performance By the end of the book you will be able to plan design build and deploy high performance XenDesktop Virtualization systems in enterprises You will also know how to monitor and maintain your systems to ensure smooth operation Style and approach This book is an all inclusive guide that uncovers hidden and previously unpublished performance improvement areas for any XenDesktop site *Securing Citrix XenApp Server in the Enterprise* Tariq Azad, 2008-08-08 Citrix Presentation Server allows remote users to work off a network server as if they weren t remote That means Incredibly fast access to data and applications for users no third party VPN connection and no latency issues All of these features make Citrix Presentation Server a great tool for increasing access and productivity for remote users Unfortunately these same features make Citrix just as dangerous to the network it s running on By definition Citrix is granting remote users direct access to corporate servers achieving this type of access is also the holy grail for malicious hackers To compromise a server running Citrix Presentation Server a hacker need not penetrate a heavily defended corporate or government server They can simply compromise the far more vulnerable laptop remote office or home office of any computer connected to that server by Citrix Presentation Server All of this makes Citrix Presentation Server a high value target for malicious hackers And although it is a high value target Citrix Presentation Servers and remote workstations are

often relatively easily hacked because they are often times deployed by overworked system administrators who haven't even configured the most basic security features offered by Citrix. The problem in other words isn't a lack of options for securing Citrix instances; the problem is that administrators aren't using them. eWeek October 2007. In support of this assertion, Security researcher Petko D. Petkov aka pdp said in an Oct 4 posting that his recent testing of Citrix gateways led him to tons of wide open Citrix instances including 10 on government domains and four on military domains. The most comprehensive book published for system administrators providing step by step instructions for a secure Citrix Presentation Server, Special chapter by Security researcher Petko D. Petkov aka pdp detailing tactics used by malicious hackers to compromise Citrix Presentation Servers. Companion Web site contains custom Citrix scripts for administrators to install, configure and troubleshoot Citrix Presentation Server. **Virtualization and Forensics** Greg Kipper, Diane Barrett, 2010-08-06
