Towards a Research Tradition in Gestalt Therapy Jan Roubal, 2016-12-14 Gestalt therapy is well grounded in its daily practice but is a field which is still in the process of developing a research tradition to support this practice Gestalt practitioner researchers devote themselves to the generation of interest in the field the enlargement of capacities and expertise and the sharing of research projects and their findings The larger Gestalt community realises that such research has begun to take place but it requires more information and to be brought into the conversation through a book that speaks of philosophy and method and actually shares some of the research that emerges This volume fills this lacuna collecting for the first time the theoretical grounds for research in

Gestalt therapy and introduces useful research methods and presents actual research projects to provide inspiration to Gestalt practitioner researchers The book will be helpful not only to Gestalt therapists interested in research but also to students of Gestalt therapy involved in training as it will serve to bolster their own academic performance It will also be of interest to the larger field of psychotherapy research in demonstrating how a clinical school based on principles such as existential dialogue phenomenology and field theory is responding to the need for evidence based practice and is keeping pace with the needs of a twenty first century professional community
