**El Niño** Caroline Arnold,1998 Explores the nature of the El Niño current and its effects on people and wildlife  
A. M. Babkina,2003 The term El Niño Spanish for the Christ Child was originally used by fishermen along the coasts of Ecuador and Peru to refer to a warm ocean current that typically appears around Christmastime and lasts for several months Fish are less abundant during these warm intervals yet in some years however the water is especially warm and the break in the fishing season persists into May or even June El Niño also brings heavy rains During the past 40 years nine El Niños have affected the South American coast Most of them raised water temperatures not only along the coast but also at the Galapagos islands and in a belt stretching 5000 miles across the equatorial Pacific The weaker events raised sea temperatures only by one to two degrees Fahrenheit but the strong ones like the El Niño of 1982-83 left an imprint not only upon the local weather and marine life but also on climatic conditions around the globe This book includes a detailed overview and bibliography with complete title author and subject indexes  
**The Oryx Resource Guide to El Niño and La Niña** Bloomsbury Publishing,2002-05-30 Fish die Seagulls starve Economies wither And that's just in the coastal villages El Niño The Christ Child and its climatological opposite La Niña are global events so powerful and strange they virtually have personalities Many remember the El Niño seasons of 1982-83 and 1997-98 which brought floods tornadoes droughts and snow to unusual locales Increased study of these Tropical Pacific phenomena also known as ENSO the El Niño and Southern Oscillation has now enabled scientists to predict the ENSO state as much as 12 to 18 months in advance and has helped to shape weather prediction in general Here the basic causes and effects of El Niño and La Niña are carefully chronicled for anyone in search of accurate and current information on these natural phenomena Chapters are devoted to the history of ENSO its influence on global weather and on the United States including the ecosystem and how governments and industries worldwide are utilizing new weather data to harness ENSO's economic impact rather than be saddled by it A chronology tours key events from the 15th century diary observations of colonists in Ecuador and Peru to recent events like the devastating El Niño of 1997-98 which was responsible for 23 000 deaths and 33 billion in damages Biographies of important researchers illustrations and maps and an extensive bibliography help make this a total guide to these magnificent natural cycles
