Saada, 2009-02-15 Through theory solved examples and problems this book helps students acquire the foundation needed to pursue advanced studies It also helps practitioners understand the source of many of the formulas they use in their designs **Mathematical Geophysics** N.J. Vlaar, G. Nolet, M.J.R. Wortel, S.A.P.L. Cloetingh, 2012-12-06 The contributions to this book follow a topical trend In several geophysical fields evidence is accumulating concerning the deviation of the earth's structure from radial symmetry Seismology provides the most adequate resolution for revealing the earth's lateral inhomogeneity on a global to local scale Lateral structure in the density distribution is also manifest in the earth's gravity field and in the geoid Asphericity in physical parameters generally supposed only to vary with the vertical coordinate has a profound influence on geodynamics The effects of these deviations from spherical symmetry concern in particular convection theory post glacial rebound and the dynamics of the lithosphere and upper mantle in general At the 16th International Conference on Mathematical Geophysics which was held in Oosterbeek the Netherlands in 1986 the need was felt to present the state of the art Several prospective authors were found interested to contribute to the present book This Oosterbeek conference was one in a long series of topical conferences starting with the Upper Mantle Project Symposia on Geophysical Theory and Computers in the 1960s and thence their successors the conferences on Mathematical Geophysics until the present *Elasticity* Martin H. unified models and numerical methods for mixed lubrication studies analyses of interfacial frictional and thermal behaviors as well as theories for studying the effects of multiple fields on interfacial characteristics The book intends to reflect the recent trends of research by focusing on numerical simulation and problem solving techniques for practical interfaces of engineered surfaces and materials This book is written primarily for graduate and senior undergraduate students engineers and researchers in the fields of tribology lubrication surface engineering materials science and engineering and mechanical engineering
