Fool Me Twice Fighting The Assault On Science In America:

Fool Me Twice Shawn Lawrence Otto, 2011-10-11 Whenever the people are well informed Thomas Jefferson wrote they can be trusted with their own government But what happens in a world dominated by complex science Are the people still well enough informed to be trusted with their own government And with less than 2 percent of Congress with any professional background in science how can our government be trusted to lead us in the right direction Will the media save us Don't count on it In early 2008 of the 2 975 questions asked the candidates for president just six mentioned the words global warming or climate change the greatest policy challenge facing America To put that in perspective three questions mentioned UFOs Today the world's major unsolved challenges all revolve around science By the 2012 election cycle at a time when science is influencing every aspect of modern life antiscience views from climate change denial to creationism to vaccine refusal have become mainstream Faced with the daunting challenges of an environment under siege an exploding population a falling economy and an education system slipping behind our elected leaders are hard at work passing resolutions that say climate change is not real and astrology can control the weather Shawn Lawrence Otto has written a behind the scenes look at how the government our politics and the media prevent us from finding the real solutions we need Fool Me Twice is the clever outraged and frightening account of America's relationship with science a relationship that is on the rocks at the very time we need it most

Facing Gaia Bruno Latour, 2017-09-05 The emergence of modern sciences in the seventeenth century profoundly renewed our understanding of nature For the last three centuries new ideas of nature have been continually developed by theology politics economics and science especially the sciences of the material world The situation is even more unstable today now that we have entered an ecological mutation of unprecedented scale Some call it the Anthropocene but it is best described as a new climatic regime And a new regime it certainly is since the many unexpected connections between human activity and the natural world oblige every one of us to reopen the earlier notions of nature and redistribute what had been packed inside So the question now arises what will replace the old ways of looking at nature This book explores a potential candidate proposed by James Lovelock when he chose the name Gaia for the fragile complex system through which living phenomena modify the Earth The fact that he was immediately misunderstood proves simply that his readers have tried to fit this new notion into an older frame transforming Gaia into a single organism a kind of giant thermostat some sort of New Age

goddess or even divine Providence In this series of lectures on natural religion Bruno Latour argues that the complex and ambiguous figure of Gaia offers on the contrary an ideal way to disentangle the ethical political theological and scientific aspects of the now obsolete notion of nature He lays the groundwork for a future collaboration among scientists theologians activists and artists as they and we begin to adjust to the new climatic regime So Far from Home Margaret J.

Entitlement Nation Bernard Arogyaswamy, 2015-04-29 Despite the admittedly gradual recovery the debate over so called entitlements rages on Coined in the 1980s to encapsulate government spending aimed at offering a helping hand in health care education housing buying food etc to those who were in need of it the label has acquired pejorative overtones Implicitly or sometimes explicitly the label now refers to payments made to the lazy the incompetent the free riders and moochers who live off the generosity of the rest of us The book argues that to begin with some of the social spending under attack is funded by earlier contributions made by the beneficiaries e g Medicare Social Security Changes may be needed in how these systems operate but scrapping them would be like throwing the baby out with

the bathwater Most other social spending is essential in order to create the skills and capabilities indispensable to competing in an economically multipolar world as well as to address the chasm of inequality that has opened up in the United States Condemning millions to live increasingly degrading lives in a country as wealthy as ours is little short of economic eugenics The main thesis of this work however is that the entitlement mind set is deeply rooted among the affluent and super rich as well Ever lower tax rates deregulation and subsidies and in general highly generous treatment is taken to be a right by large corporations and the affluent This entitlement is ensured by an army of compliant politicians and lobbyists ideology driven think tanks a market oriented media Entitlement is a society wide phenomenon and we are all culpable in that regard As an exceptional nation we reserve the right to act as we see fit in defense of our unique values Paradoxically we sometimes violate those very values in the process of defending them The entitlement to be prosecutor judge and jury also stands out in national attitudes to globalization and our policies in science and technology Religious Right A.F. Alexander,2012-04-02 There is a deceptive movement to take over the government courts education system media outlets and American culture with stealth and it s true How is this possible Find out in the pages of this expose written by an insider who left the Religious Right fold and now shares why they believe they are mandated to have dominion over every aspect of life in the United States It reveals how their vision for America is not a democracy at all Understand the Religious Right network s blueprint for America Meet the Christian Reconstructionists and Dominionists Understand the Seven Mountains Mandate which provides the strategy for a successful takeover See why Quiverfull is the template for a proper traditional family Finally understand the attacks on public schools and teachers Find out who the leaders of the movement really are and their successful tactics This book explains the rewriting of our nation s history Complete with interviews research and bibliography included Presentation is organized and systematic while in plain English Shares how to get involved and make a difference in your community to protect your rights and preserve democracy *Environmental Risk Assessment* Ted Simon,2014-02-05 The purpose of risk assessment is to support science based decisions about how to solve complex societal problems The problems we face in the twenty first century have many social political and technical complexities Environmental risk assessment in particular is of increasing importance as a means of seeking to address the potential effects of chemicals in the environment in both the developed and developing world *Environmental Risk Assessment A Toxicological Approach* examines various aspects of problem formulation exposure toxicity and risk characterization that apply to both human health and ecological risk assessment The book is aimed at the next generation of risk assessors and students who need to know more about developing conducting and interpreting risk assessments It delivers a comprehensive view of the field complete with sufficient background to enable readers to probe for themselves the science underlying the key issues in environmental risk Written in an engaging and lively style by a highly experienced risk assessment practitioner the text Introduces the science of risk assessment past present and future Covers problem formation and the development of exposure factors Explains how

human epidemiology and animal testing data are used to determine toxicity criteria Provides environmental sampling data for conducting practice risk assessments Examines the use of in vitro and omics methods for toxicity testing Describes the political and social aspects of science based decisions in the twenty first century Includes fully worked examples case studies discussion questions and links to legislative hearings Readers of this volume will not only learn how to execute site specific human health and ecological risk assessments but also gain a greater understanding of how science is used in deciding environmental regulations Once We All Had Gills Rudolf A.
