

To assist in making sharp turns at slow speeds, depress the right or left brake pedals as required.

**CAUTION:** When operating the tractor at high speeds, never attempt to make sharp turns by using the brakes. Sharp turns at high speeds may result in tractor overturn.

### BRAKE PEDAL LOCK

The brake pedal lock, shown in Figure 7, is used to secure the brake pedals together. Lock the pedals together whenever the tractor is operated at high speeds and at any time the tractor is used on the highway.

### PARKING BRAKE CONTROL

The parking brake control, shown in Figure 7, is used for locking the brake pedals in the applied position. The parking brake should be applied whenever the tractor is parked, Figure 8.

Figure 8 — Parking Brake

To apply the brake:

- Lock the brake pedals together with the brake pedal lock.
- Depress both brake pedals.
- Pull up on the parking brake control. The pawl on the control will engage the teeth on the left-hand brake pedal and will retain the pedals in the applied position.

To release the parking brake:

- Depress the brake pedals to release the pawl.
- Unlock the brake pedals if operating conditions require independent rear wheel braking action.

### DIFFERENTIAL CONTROL DIFFERENTIAL LOCK PEDAL

The differential lock pedal is shown in Figure 9. Depressing the pedal locks the rear axle shafts together, providing additional traction in wet or loose soil. Refer to page 15 for differential lock operating information.

**CAUTION:** Tractor is very difficult to steer with differential lock engaged.

Figure 9 — Differential Lock

### TRANSMISSION AND PTO CONTROLS

#### TRANSMISSION GEARSHIFT LEVERS

The transmission mainshift lever and range selector lever are shown in Figure 10. A diagram showing the shift pattern is cast into the transmission cover.

Three forward and one reverse speed are provided for each of the four ranges. This provides a total of 12 forward and four reverse speeds.
