Analysis of Naturally Occurring Food Toxins of Plant Origin Leo M.L. Nollet,Javed Ahmad,2022-12-02 Natural toxins are toxic compounds that are naturally produced by living organisms These toxins are not harmful to the organisms themselves but they may be toxic to other creatures including humans when eaten These chemical compounds have diverse structures and differ in biological function and toxicity Some toxins are produced by plants as a natural defense mechanism against predators insects or microorganisms or as a consequence of infestation with microorganisms such as mold in response to climate stress such as drought or extreme humidity Well known groups of natural toxins of plant origin are cyanogenic glycosides pyrrolizidine alkaloids furocoumarins lectins and glycoalkaloids These plant origin natural toxins can cause a variety of adverse health effects and pose a serious health threat to both humans and livestock Analysis of Naturally Occurring Food Toxins of Plant Origin is divided into three sections that provide a detailed overview of different classes of food toxins that are naturally found in plants including various analytical techniques used for their structural characterization identification detection and quantification This book provides in depth information

Process-Induced Food Toxicants Richard H. Stadler, David R. Lineback, 2008-12-09 Process Induced Food Toxicants combines the analytical health and risk management issues relating to all of the currently known processing induced toxins that may be present in common foods. It considers the different processing methods used in the manufacture of foods including thermal treatment, drying, fermentation, preservation, fat processing, and high hydrostatic pressure processing, and the potential contaminants for each method. The book discusses the analysis, formation, mitigation, health risks, and risk management of each hazardous compound. Also discussed are new technologies and the impact of processing on nutrients and allergens. Toxins and Other Harmful Compounds in Foods A. Witczak, Zdzislaw Sikorski, 2017-01-12 Presents

information based on scientific evidence on the contents of harmful compounds in food raw materials and products such as grains, fruits, and vegetables, mushrooms, seafood, milk, and dairy products, meats, and various processed foods. Shows the effects of environmental pollution and the conditions of harvesting and storage of the raw materials on food contamination. Discusses the real food safety hazards to the consumers caused by toxins of microbial origin and chemical contamination. Describes the beneficial role of processing to decrease the contents of harmful components in food products. Presents the role of legislation, quality assurance systems, and available analytical techniques in assuring food safety. **Handbook of Food Analysis - Two Volume Set** Leo M.L.
