Foundations In Social Neuroscience Social Neuroscience:

Foundations in Social Neuroscience John T. Cacioppo, 2002 A comprehensive survey of the growing field of social neuroscience

Social Neuroscience and Public Health Peter A. Hall, 2013-05-26 The field of public health is primarily concerned with understanding and improving physical health from a large group perspective i.e. communities and whole populations The field of social neuroscience on the other hand is primarily concerned with examining brain behavior relationships that unfold in a social context Both of these are rapidly developing fields of inquiry and their boundaries have only recently begun to overlap This book discusses collaborative research findings at the intersection of social neuroscience and public health that promise to fundamentally change the way scientists public health practitioners and the general public view physical health within the larger social context Eighteen chapters are organized under the following major sections cognition and health outcomes neuroscientific aspects of health communication health behavior and the neurobiology of self regulation neurobiological processes in health decision making ecological and social context neuroscience methods and future directions

Descriptive Adaptation Studies Patrick Cattrysse, 2014-02-18 It is common practice nowadays for adaptation critics to denounce the lack of meta theoretical thinking in adaptation studies and to plead for a study of adaptation as adaptation one that eschews value judgments steps beyond normative fidelity based discourse examines adaptation from an intertextual perspective and abandons the single source model for a multiple source model This study looks into a research program that does all that and more It was developed in the late 1980s and presented in the early 1990s as a polysystem PS study of adaptations Since then the PS label has been replaced with descriptive This book studies the question of whether and how a PS approach could evolve into a descriptive adaptation studies DAS approach Although not perfect no method is DAS offers a number of assets Apart from dealing with the above mentioned issues DAS transcends an Auteurist approach and looks at explanation beyond the level of individual agency even if contextualized As an alternative to the endless accumulation of ad hoc case studies it suggests corpus based research into wider trends of adaptational behavior and the roles and functions of sets of adaptations DAS also allows reflection upon its own epistemic values It sheds new light on some old issues How can one define adaptation What does it mean to study adaptation as adaptation Is equivalence still possible and is the concept still relevant DAS also tackles some deeper epistemological issues How can phenomena be compared Why would difference be more real than sameness or change more real than stasis How does description relate to evaluation explanation and prediction etc This book addresses both theory minded scholars who are interested in epistemological reflection and practice oriented adaptation students who want to get started From a theoretical point of view it discusses arguments that could support the legitimacy of adaptation studies as an academic discipline From a practical point of view it explains in general terms ways of conducting an adaptation study Patrick Cattrysse's work is of utmost importance to Adaptation Studies As the first extended attempt to develop a rigorous methodology which borrows in

very meaningful ways from Adaptation Studies cousin Translation Studies this book should be on every Adaptation scholar's shelf While Hutcheon's Sanders and Leitch to name but a few laid the groundwork which allowed Adaptation Studies to establish itself as a field of inquiry in its own right Cattrysse moves the field into the next necessary stage that of developing conceptual tools which stand the test of critical investigation and allow Adaptation Studies to move beyond the single case study approach Katja Krebs University of Bristol This book is a bold initiative it proposes and illustrates a comprehensive new empirical research programme for film adaptation studies inspired by the way systems theory and norm theory have expanded Translation Studies One of the book's unusual strengths is the way the proposal is grounded in a thoughtful theoretical discussion of conceptual and methodological issues dealing with such notions as theory descriptivism definition diachrony and explanation This gives the work a significance that ranges well beyond Adaptation Studies alone it deserves the attention of scholars in the humanities in general Andrew Chesterman University of Helsinki This dense and theoretically informed study argues forcefully for a descriptive systems analysis approach to literature film adaptation building on the author's earlier corpus based study of film noir and adaptation Providing a wide ranging discussion of important critical questions including the place of logical positivism in humanistic studies this book will give adaptation scholars much to think about Well written carefully organized and consistently persuasive DESCRIPTIVE ADAPTATION STUDIES promises to be an important intervention in a field of increasing importance in humanistic studies Must reading for scholars in the field R Barton Palmer Clemson University

Timeless Louis Cozolino, 2018-05-01 Unlocking the secrets of positive aging Few prejudices in Western society are more powerful than those concerning aging Until recently we have assumed that the story of aging is one of loss and decline But there's an entirely different truth Yes you can teach an old dog or even a sort of old dog new tricks Is there a secret to staying young It turns out that there are many and they all begin with nurturing our existing relationships to foster brain health keeping us happier and healthier As readers of this book will learn wisdom enhanced social relationships greater adaptation and flexibility mental if not physical all these things can be attained as we grow older Filled with both practical and thought provoking suggestions this book is a must read for anyone who wants to age in style

Neuroscience and Social Science Agustín Ibáñez, Lucas Sedeño, Adolfo M. García, 2017-11-02 This book seeks to build bridges between neuroscience and social science empirical researchers and theorists working around the world integrating perspectives from both fields separating real from spurious divides between them and delineating new challenges for future investigation Since its inception in the early 2000s multilevel social neuroscience has dramatically reshaped our understanding of the affective and cultural dimensions of neurocognition Thanks to its explanatory pluralism this field has moved beyond long standing dichotomies and reductionisms offering a neurobiological perspective on topics classically monopolized by non scientific traditions such as consciousness subjectivity and intersubjectivity Moreover it has forged new paths for dialogue with disciplines which directly address societal dynamics such as economics law education public policy

making and sociology At the same time beyond internal changes in the field of neuroscience new problems emerge in the dialogue with other disciplines Neuroscience and Social Science The Missing Link puts together contributions by experts interested in the convergences divergences and controversies across these fields The volume presents empirical studies on the interplay between relevant levels of inquiry neural psychological social chapters rooted in specific scholarly traditions neuroscience sociology philosophy of science public policy making as well as proposals of new theoretical foundations to enhance the rapprochement in question By putting neuroscientists and social scientists face to face the book promotes new reflections on this much needed marriage while opening opportunities for social neuroscience to plunge from the laboratory into the core of social life This transdisciplinary approach makes Neuroscience and Social Science The Missing Link an important resource for students teachers and researchers interested in the social dimension of human mind working in different fields such as social neuroscience social sciences cognitive science psychology behavioral science linguistics and philosophy

What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr, 2016-09-28 Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one's interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current

knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also welcomed submissions of meta analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field

So Stressed Stephanie McClellan, Beth Hamilton, 2010-02-18 So Stressed is also a landmark health book for women by two internationally respected female physicians It combines insights from the authors combined 50 plus years of clinical experience to reveal a unique view on stress and how it affects women's bodies and minds McClellan and Hamilton reveal how stress disrupts the intricate balance of the female body to make it the root cause of an astoundingly wide range of physical problems They have pulled together findings from around the world that substantiate their breakthrough view of stress as a previously unsuspected widespread factor in chronic health conditions and premature ageing They guide readers through the body in an accessible interesting new way to show stress's effect on brain and pain endocrine and immune systems metabolism and heart libido and reproductive systems and basic wellbeing Their cutting edge findings make essential reading for women of all ages and couldn't be timelier This very important book will enable women everywhere to make lifestyle choices that will change and possibly save their lives

Handbook of Neurosociology David D. Franks, Jonathan H. Turner, 2012-07-09 Until recently a handbook on neurosociology would have been viewed with skepticism by sociologists who have long been protective of their disciplinary domain against perceived encroachment by biology But a number of developments in the last decade or so have made sociologists more receptive to biological factors in sociology and social psychology Much of this has been encouraged by the coeditors of this volume David Franks and Jonathan Turner This new interest has been increased by the explosion of research in neuroscience on brain functioning and brain environment interaction via new MRI technologies with implications for social and psychological functioning This handbook emphasizes the integration of perspectives within sociology as well as between fields in social neuroscience For example Franks represents a social constructionist position following from G H Mead's voluntaristic theory of the act while Turner is more social structural and positivistic Furthermore this handbook not only contains contributions from sociologists but leading figures from the psychological perspective of social neuroscience

The Family Emotional System Robert J. Noone, Daniel V. Papero, 2015-10-30 The Family Emotional System An Integrative Concept for Theory Science and Practice presents an ongoing dialogue among scientists family investigators and clinicians related to a natural systems view of the family and human behavior that has been occurring over several decades The concept of the family as an emotional system as defined in Bowen theory is presented as the principal integrative concept underlying this dialogue and an effort to move toward a

science of human behavior As a natural system the family forms the immediate and most important context for individual development and may be the most central and important environment shaping brain development across the lifetime of the individual This book explains how the family system can serve as an integrative framework within which specific factual discoveries and hypotheses from many areas of science can be brought together and understood as various manifestations of a coherent whole The Family Emotional System provides understanding of what is entailed in conceptualizing the family as an emotional system a sense of the breadth and depth of knowledge the sciences are contributing to this effort and examples of how this theoretical framework contributes to family research and practice The richness and excitement occurring in the ongoing dialogue between scientists and Bowen family systems practitioners and researchers is captured along with the promise it holds for the study of human behavior

Abi-Rached, 2013-02-24 The brain sciences are influencing our understanding of human behavior as never before from neuropsychiatry and neuroeconomics to neurotheology and neuroaesthetics Many now believe that the brain is what makes us human and it seems that neuroscientists are poised to become the new experts in the management of human conduct *Neuro* describes the key developments theoretical technological economic and biopolitical that have enabled the neurosciences to gain such traction outside the laboratory It explores the ways neurobiological conceptions of personhood are influencing everything from child rearing to criminal justice and are transforming the ways we know ourselves as human beings In this emerging neuro ontology we are not determined by our neurobiology on the contrary it appears that we can and should seek to improve ourselves by understanding and

acting on our brains Neuro examines the implications of this emerging trend weighing the promises against the perils and evaluating some widely held concerns about a neurobiological colonization of the social and human sciences Despite identifying many exaggerated claims and premature promises Neuro argues that the openness provided by the new styles of thought taking shape in neuroscience with its contemporary conceptions of the neuromolecular plastic and social brain could make possible a new and productive engagement between the social and brain sciences Publisher s description

Brains, Genes, and the Foundations of Human Society Jordan Grafman,Chad E. Forbes, The last 20 years have yielded an explosion of information from the still nascent field of social neuroscience Studies devoted to identifying neural correlates of social cognitive and moral judgment processing have established subcortical and cortical regions that are integral for how we filter and interpret information pertinent to family and friends our social in group and strangers and engage in everything from forming immediate impressions of them to judging their behavior with respect to complex moral norms What is less clear is how neural regions involved in implicit and explicit cognitive processing or those cognitive processes that occur almost instantaneously as opposed to those that are more controlled respectively interact to bias perceptions and behavior Even less is known about how genes and their variants critical for neural function and the structural integrity within neural regions may modulate neural interactions critical for social cognitive and moral judgment processing Recent methodological advancements assessing how different neural regions functionally work together with

others and how different genetic variants integral for neural function alter behavior are establishing a more comprehensive view of the implicit and explicit social brain. These advancements demonstrate that structures critical for implicit processing e.g. the amygdala reliably covary in their activity with structures integral for explicit processing e.g. dorsolateral prefrontal cortex early and often during the processing of social information of varying complexity and in different contexts. This suggests that interactions between these regions are necessary to successfully navigate and immediately adapt to one's environment. In turn, genetic variants like those that comprise the brain derived neurotrophic factor (BDNF) gene, oxytocin receptor gene, or serotonin transporter gene likely play an important role in modulating the interaction between and within neural regions integral for interpersonal trust, intergroup processes, person perception, theory of mind i.e. inferring the thoughts and feelings of others, and moral judgment processing. The purpose of this Research Topic is to further our understanding of how subcortical and cortical neural regions that vary in their functional contributions to social behavior also depend upon genetic influences in shaping individuals' perceptions, beliefs, attitudes, behaviors, and how information is attended to and encoded to influence future social behaviors. It is particularly important to demonstrate how these regions reliably interact as a function of processing speed i.e. implicit or explicit and/or context to predict behavior or performance. Demonstrating how different genetic factors in turn moderate this interaction or how genetic factors alter a specific region's interaction with other regions is equally important. We therefore solicit original empirical work, review and opinion papers, and methodological papers that can promote our understanding of how interactions between neural regions underlying implicit and explicit processes influence social cognitive and moral judgment processing and are in turn modulated by genetic predispositions. This includes work that utilizes fMRI, EEG, and psychophysiological methodologies, lesion samples, as well as developmental and computational approaches. This Research Topic could serve as an important step in the evolution of our understanding of the complexity of the social mind, as well as illuminate the robust effects context has on the way the brain interacts with different stimuli at every level of cognitive processing.

Mindfulness in Organizations Jochen Reb, Paul W. B. Atkins, 2015-06-30. Mindfulness techniques having long played an important role in contemplative traditions around the world are now recognized as having the potential to transform workplaces. As interest in the role of mindfulness in organizational settings continues to increase, this timely book fills a gap in the literature by providing an overview of the latest theoretical and empirical research on workplace mindfulness. It brings together world-leading scholars to explore the foundations, key discussions, diversity of approaches, and applications of mindfulness in organizations. It acts as a catalyst for future research on the topic by suggesting research directions and stimulating organizational researchers to embark on new projects involving mindfulness. Furthermore, it provides valuable ideas for implementing mindfulness programs in organizations for teaching mindfulness in business contexts and for coaching with mindfulness. This must-read book will appeal to researchers and professionals in the fields of organizational behavior, organizational psychology, and employee well-being.
