Foundations Of Cellular Neurophysiology

Foundations Of Cellular Neurophysiology:

Foundations of Cellular Neurophysiology Daniel Johnston, Samuel Miao-Sin Wu, 1994-11-02 with simulations and illustrations by Richard Gray Problem solving is an indispensable part of learning a quantitative science such as neurophysiology This text for graduate and advanced undergraduate students in neuroscience physiology biophysics and computational neuroscience provides comprehensive mathematically sophisticated descriptions of modern principles of cellular neurophysiology It is the only neurophysiology text that gives detailed derivations of equations worked examples and homework problem sets with complete answers Developed from notes for the course that the authors have taught since 1983 Foundations of Cellular Neurophysiology covers cellular neurophysiology also some material at the molecular and systems levels from its physical and mathematical foundations in a way that is far more rigorous than other commonly used texts in this area **Foundations of cellular neurophysiology** Johnston, 1994 **Foundation of cellular neurophysiology** ,

Calculus for Cognitive Scientists James Peterson, 2016-02-11 This book shows cognitive scientists in training how mathematics computer science and science can be usefully and seamlessly intertwined It is a follow up to the first two volumes on mathematics for cognitive scientists and includes the mathematics and computational tools needed to understand how to compute the terms in the Fourier series expansions that solve the cable equation The latter is derived from first principles by going back to cellular biology and the relevant biophysics A detailed discussion of ion movement through cellular membranes and an explanation of how the equations that govern such ion movement leading to the standard transient cable equation are included There are also solutions for the cable model using separation of variables as well an explanation of why Fourier series converge and a description of the implementation of MatLab tools to compute the solutions Finally the standard Hodgkin Huxley model is developed for an excitable neuron and is solved using MatLab

BioInformation Processing James K. Peterson, 2016-02-10 This book shows how mathematics computer science and science can be usefully and seamlessly intertwined It begins with a general model of cognitive processes in a network of computational nodes such as neurons using a variety of tools from mathematics computational science and neurobiology It then moves on to solve the diffusion model from a low level random walk point of view It also demonstrates how this idea can be used in a new approach to solving the cable equation in order to better understand the neural computation approximations It introduces specialized data for emotional content which allows a brain model to be built using MatLab tools and also highlights a simple model of cognitive dysfunction *Confocal Microscopy* Stephen W. Paddock, 2008-02-03
